Grades 3-5 Pollution

Amy Silviotti
Pace University
Subject: Science
Topic: Pollution
Grade: Fourth

Standards: The following standards have been met within this unit:

**Mathematics, Science, and Technology**

**Standard Four: Science**

Students will understand and apply scientific concepts, principles, and theories pertaining to the physical setting and living environment and recognize the historical development of ideas in science.

Students will:
- Describe the relationships among air, water, and land on Earth
- Describe the characteristics of and variations between living and nonliving things
- Describe some survival behaviors of common living specimens
- Describe the factors that help promote good health and growth in humans
- Describe how plants and animals, including humans, depend upon each other and the nonliving environment
- Identify ways in which humans have changed their environment and the effects of those changes

**English Language Arts**

**Standard One: Language for Information and Understanding**

Students will listen, speak, read, and write for information and understanding. As listeners and readers, students will collect data, facts, and ideas; discover relationships, concepts, and generalizations; and use knowledge generated from oral, written, and electronically produced texts. As speakers and writers, they will use oral and written language that follows the accepted conventions of the English language to acquire, interpret, apply, and transmit information.

**Standard Two: Language for Literary Response and Expression**

Students will read and listen to oral, written, and electronically produced texts and performances from American and world literature; relate texts and performances to their own lives; and develop an understanding of the diverse social, historical, and cultural dimensions the texts and performances represent. As speakers and writers, students will use oral and written language that follows the accepted conventions of the English language for self-expression and artistic creation.

**Standard Three: Language for Critical Analysis and Evaluation**

Students will listen, speak, read, and write for critical analysis and evaluation. As listeners and readers, students will analyze experiences, ideas, information, and issues
presented by others using a variety of established criteria. As speakers and writers, they will use oral and written language that follows the accepted conventions of the English language to present, from a variety of perspectives, their opinions and judgments on experiences, ideas, information and issues.

**Standard Four: Language for Social Interaction**

Students will listen, speak, read, and write for social interaction. Students will use oral and written language that follows the accepted conventions of the English language for effective social communication with a wide variety of people. As readers and listeners, they will use the social communications of others to enrich their understanding of people and their views.

**The Arts**

**Standard One: Creating, Performing, and Participating in the Arts**

Students will actively engage in the processes that constitute creation and performance in the arts (dance, music, theatre, and visual arts) and participate in various roles in the arts.

**Standard Two: Knowing and Using Art Materials and Resources**

Students will be knowledgeable about and make use of the materials and resources available for participation in the arts in various roles.

**Hook:**

When students enter the classroom in the morning, they are given a “Do Now”. As everyone is working, teacher will begin to make noise pollution sounds. These sounds will include very loud, distracting noises such as moving the tables/chairs, rustling paper; using loud speakers to play unnecessary noise, etc. Teacher will be sure to make noise so that the morning greeting over the school loudspeaker cannot be heard. After doing this for the duration of the Do Now, teacher will ask students how the noise made them feel. Once it is agreed upon that it was a disturbing quality to have in the classroom, teacher will make students aware that this is called noise pollution and it affects people around the world. Teacher will explain that noise pollution can come in many different ways, including loud cars, planes, factories, etc. Teacher will then explain that there are other kinds of pollution and invite students to brainstorm what they may be. Teacher will fill in a semantic web of student ideas. Teacher will prompt, “If the noise was so disturbing to you, think of
how water pollution may disturb animals that live in water, or how air pollution may affect birds and trees. Teacher will lead the discussion about pollution and begin the unit.

**Essential Questions:**
- What are the causes of pollution?
- What are the consequences of the many different types of pollution on the world we live in?
- What can we do to prevent further pollution?

**Understandings:**
Students will:

- Know and explain the definition of pollution.
- Be able to articulate the main types of pollution, including air pollution, water pollution, land pollution, and noise pollution.
- Identify what the causes of pollution in our environment are, including individual human actions (not recycling, littering) as well as large scale actions (factory buildings, cars).
- Work with a partner or in groups and collaborate on projects that involve making others aware of the cause, effect, and prevention of pollution.
- Be able to self-express individual opinions on pollution.
- Observe the simple steps that can be taken to keep our environment clean and use this knowledge to take part in protecting the environment by volunteering in community services.
- Inform others about pollution, its negative affects, and what can be done to prevent it in various ways, including written, performance, artistic, and oral.

**Pre-Assessment:** Prior to beginning this lesson, students will be pre-assessed on their knowledge of pollution and other important terms associated with it. Students will take a short vocabulary matching quiz that will include the terms pollution, environment, litter, pollutant, recycle, conserve, habitat, endangered, prevent, and rainforest. Students will
then be able to answer several short answer questions about pollution. These questions include:

1. What do you think causes pollution on our earth? Give specific examples.
2. How does pollution affect our environment? Does it have a negative or positive impact? Why do you think so?
3. What are some things we can do to prevent further pollution of our earth? Give specific examples and explain why they would be good for our environment.

Tiered by:

Students will first be tiered by their ability. Their ability will be determined after the analysis of the pre-assessment quiz given by the teacher. Students will be placed in one of three groups. Students who scored high on the pre-assessment will be placed in the high group, students who scored average will be placed in the middle group, and students who scored low will be placed in the low group. These groups will be color coordinated. For no specific reason, the high group will be called “The Blue Group”, the middle group will be called “The Green Group”, and the low group will be called “The Red Group”.

Once students have been placed in their tiered ability groups, they will have the opportunity to choose from a various range of activities on a “Pollution Contract” sheet. Students are required to complete three independent and/or paired activities throughout the unit. They have the option to choose one of three activities per essential question. For example, when studying the cause of pollution, students have three activities they can choose from that will require them to express their knowledge of the causes of pollution. This is the same for the effects of pollution and how to prevent further pollution. Each tiered ability group (blue, green, and red) will have a different set of options tailored to
their ability. In addition, there are many different options on each Pollution Contract that lends itself to student interest. The activities include all of Gardner's eight intelligences.

On the Pollution Contract, the activities in the purple squares represent the cause of pollution. The activities in the orange squares represent the effects of pollution. The activities in the teal squares represent the prevention of further pollution.

**Post-Assessment:**

Post-Assessment for this lesson will be completed by the teacher through the use of rubrics. Three rubrics were created for each part of the lesson. One rubric is to be used for the evaluation of the cause of pollution, one rubric is to be used for the evaluation of the effects of pollution, and one rubric is to be used for the evaluation of the prevention of further pollution. The main difference between these rubrics is the content evaluation piece. The other categories students will be scored on are effort, organization skills, and timeliness. The content portion of the rubrics helps the teacher determine if the students fully grasp the material learned in class about the cause, effect, and prevention of pollution.

In addition to the use of rubrics, assessment will be made throughout the unit and lesson based on teacher observation of the students.
Day One: Pre-assessment quiz on pollution: Students will complete a vocabulary matching sheet as well as answer several short answer questions about pollution.

Day Two: Hook: Teacher will create noise pollution in the classroom. Teacher will hold a discussion with the students about how it made them feel, as well as introduce several other types of pollution, including air, water, and land. Teacher will show students several pictures of different habitats. Each habitat will have two pictures associated with it: one picture in which there is no pollution and one where pollution is abundant. Students will discuss the differences in the pictures and what the causes of the differences are.

Day Three: Read-aloud of Where does Pollution Come From? Students are split into their tiered groups and pick their first activity from their contracts to complete. For some students, this activity is ongoing and will be completed/presented within the next week.

Day Four: Show pollution videos on kids.nationalgeographic.com. The videos include information on air pollution (flowers losing their scents as a result), as well as plastic bags, water pollution, and more. Discuss what students saw in these videos. Students will make a class chart that includes air pollution, water pollution, land pollution, and noise pollution in one column and effects in another. The class will fill out the different effects they saw in the videos and from prior knowledge that these types of pollution have on the environment.

Day Five: Read-aloud of The Lorax. As a class, students will discuss the definition of pollution and how it affected each character in The Lorax. Teacher will record student responses. Class will discuss how the characters in the book feel about pollution, including the Once-ler and how his views may have changed by the end of the book.

Day Six: Students are given partners to buddy read The Great Kapok Tree. Partners will be assigned so that low level learners will receive scaffolding from higher level learners. After the reading, students will discuss with their partners how the man in the story was negatively affecting the environment. Students will regroup in their tiered sections and choose the second activity to complete. For some students, this activity is ongoing and will be completed/presented within the next week.

Day Seven: Teacher takes students on a field trip to the local recycling center. A representative of the center will give students a tour and discuss various ways they are able to help protect the environment. After the trip, students will have a discussion about what they learned and why they feel recycling is important.
Day Eight: Teacher will picture walk through *Garbage and Recycling (Young Discoverers: Environmental Facts and Experiments)* with the students. Students will fill out a KWL chart about recycling before reading. Teacher will read aloud the book and complete the chart with the class.

Day Nine: As a class, students will create a large A-Z book about pollution, the environment, and recycling. Each student will have the opportunity to come up with text to put in the book and draw an associated picture. Teacher will donate the book to the school library for students in every grade to read.

Day Ten: In their tiered groups, students will choose the last activity to complete. For some students, this activity is ongoing and will be completed / presented within the next week. The unit will end with a read aloud of *It's Earth Day! (Little Critter)*. Students will be able to plant a small tree on school property as part of their contribution to helping the environment stay strong.
Pre-Assessment

Directions: Match each word to the correct definition. Write the letter of the word next to the definition.

A. Pollution _____ Waste material that infects air, soil, or water.
B. Environment _____ The area where an organism or a community of organisms lives.
C. Litter _____ A dense forest found in a tropical region with abundant rainfall.
D. Pollutant _____ The contamination of soil, water, or the atmosphere by the discharge of harmful substances.
E. Recycle _____ In danger of extinction.
F. Conserve _____ To protect from loss or harm; to avoid waste.
G. Habitat _____ Carelessly discarded waste.
H. Endangered _____ To keep from happening.
I. Prevent _____ To use again; to reprocess.
J. Rainforest _____ The conditions that surround an individual; surroundings.
Pre-Assessment

Directions: Answer the following questions. Use complete sentences.

1. What do you think causes pollution on our Earth? Give specific examples.

_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________

2. How does pollution affect our environment? Does it have a negative impact or a positive impact? Why do you think so?

_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
_____________________________________________________
3. What are some things we can do to prevent further pollution on our Earth? Give specific examples and explain why they would be good for our environment.

____________________________________________________________________

____________________________________________________________________

____________________________________________________________________

____________________________________________________________________

____________________________________________________________________

____________________________________________________________________
Choose one product that causes pollution (plastic, smoke, cars, oil, etc). With a buddy, write and act out a skit that explains how “you” are bad for the environment.

With one or two partners, plan a campaign that makes others aware of the causes of pollution. Create a flyer that informs what the campaign is about and where it will take place.

For one week, keep a personal log of how many non-recyclable materials you use. Then, write a paragraph explaining when you used the materials and why they negatively affect the environment.

We recently read The Great Kapok Tree. Pretend you are a tree in the rainforest. Write a persuasive paper to a lumberjack that wants to cut you down. Explain why it would be bad for the environment to do so.

Walk around the perimeter of the school with a buddy. Tally the non-recyclable materials you see in a math log and report your findings to the class.

Create a collage using non-recyclable materials that illustrates the dangers of pollution. Write a short paragraph explaining your collage. This will be presented to the class.

Create an illustrated advertisement for a product that may reduce pollution in your environment. Write a slogan for your product.

Write lyrics for and perform a song about at least three ways to prevent pollution. The music can be either from The 12 Days of Christmas, Twinkle Twinkle Little Star, Mary had a Little Lamb, or create your own.

Write a letter to the congressman/woman detailing what you’ve learned about pollution as well as suggestions he/she can take to help conserve the environment.

BLUE GROUP

Choose an activity from each colored square group. Cut out your three choices and glue them below. You are responsible for meeting the requirements and completing these activities by __________. Have fun!
Pollution Contract

Choose an activity from each colored square group. Cut out your three choices and glue them below. You are responsible for meeting the requirements and completing these activities by __________. Have fun!

- Design a flip book that shows the progression of pollution over the years. For example, a person who used to walk everywhere may now drive a car, or the slow increase of a pile of plastic bottles. Include captions.

- With a partner, debate what you think the leading cause of pollution is today. Take notes and be prepared for a quick response!

- Collect five non-recyclable materials. Draw them and write one to two sentences on each about how to identify the object as non-recyclable.

- Create an acrostic poem using the words KAPOK TREE that explains the effect pollution has on the rainforests.

- How do you feel about the outcome that pollution has on the environment? Write an opinionated essay that explains your feelings. Be sure to use examples from The Great Kapok Tree.

- Write lyrics for and perform a song about at least two ways to prevent pollution. Choose from the following tunes: The 12 Days of Christmas, Twinkle Twinkle Little Star, or Mary had a Little Lamb.

- Pantomime (act out with no sound) three different ways that you can prevent pollution in the classroom.

- Create a picture book that shows different habitats in states of pollution. Include captions. You are going to present this book to the class.

- Create an informative pamphlet on simple steps one can take to reduce pollution in their homes.

Have you finished your assignment and still have time left over? First, ask yourself—Have I finished everything I need to do with my best personal effort? If the answer is yes, here are some suggestions of what you can do with your extra time......

- **Read:** Get your reading log out and log some reading minutes for the day!
- **Respond:** How do you think your assignment went? I would love to know what you think! Write down what you liked and what you think could have been improved.
- **Write:** We read several books during our pollution unit. Write a book report on one of them and tell me what you thought of the book.
- **Practice:** Take out your cursive workbook and practice your penmanship. Or, you can practice your keyboarding skills on the computer.
- **Help:** Help someone in your group (blue, green, or red) with their assignment.
- **Create:** Write a math story problem or create a puzzle for other students to solve.
- **Research:** Want to know more about pollution? Visit KidsforSavingEarth.org to learn more! Afterwards, write down new things you may have learned.
- **Illustrate:** Draw illustrations for a story you have written.
- **Use:** Use your imagination and creativity to challenge yourself!
Resources

Books:

Where Does Pollution Come From? by C. Vance Cast and Sue Wilkinson

The Lorax, by Dr. Seuss

The Great Kapok Tree, by Lynne Cherry

Its Earth Day! (Little Critter), by Mercer Mayer

Garbage and Recycling (Young Discoverers: Environmental Facts and Experiments), by Rosie Harlow

Internet:

  
  This website contains many useful videos about pollution. The videos include short clips on water pollution, an alternative use to plastic bags, and more.

  
  This website is a kid friendly informational site that gives students additional information about pollution. There is a section on global warming, a music section, and an animal informational section.
