TRANSPORTATION, COOPERATION AND HARMONIZATION: GATS AS A GATEWAY TO INTEGRATING THE UN SEABORNE CARGO REGIMES INTO THE WTO

Lijun Zhao*

ABSTRACT
This paper seeks to analyze how the World Trade Organization (WTO) may cooperate with the United Nations (UN) to unify seaborne cargo regimes. Beginning with the current dilemma of uniform maritime transport regime, the paper explores the relationship between the UN and the WTO. In light of the successful precedent of the incorporation of the UN intellectual property regime into the WTO, this paper probes into the feasibility that the UN and the WTO may interactively unify a maritime transport regime by reference to selected previous treaties, which include UN-administrated treaties. This paper argues the WTO-based sea transport negotiations do not start from a zero basis so that it can be traced backwards to negotiating the General Agreement on Trade in Services (GATS). Having scrutinized the progress and regress in the negotiations so far under the WTO framework, this paper stresses the potential role of an annex on sea transport to the GATS so as to address the issue of harmonization.
TABLE OF CONTENTS

I. Introduction

II. Comparison of Two Approaches to Unify Transport Law: the WTO and the UN

   D. Reopening of Maritime Transport Negotiations under the WTO Framework

V. Conclusion
I. INTRODUCTION

Maritime transport is a significant facilitator of world trade with approximately four-fifths of goods (by volume) being carried by sea and is an important service sector that makes significant contributions to some national Gross Domestic Products (GDP). Concerning the harmonization of the maritime transport regime, the literature is unevenly focused on the United Nations (UN) and the world trading system (including the predecessor General Agreement on Tariffs and Trade (GATT) system and the current World Trade Organization (WTO) system. Traditionally, the harmonization of the maritime transport regimes have been negotiated under the UN,
but the UN framework has demonstrated shortcomings in fulfilling this task. Although the UN endeavors to foster a uniform regime by drafting the Rotterdam Rules, it will not easily replace the earlier effective conventions of The Hague, Visby, and Hamburg Rules to form a uniform regime worldwide. Moreover, the UN system of enforcement does not have the administrative framework at the international level to safeguard the application of these seaborne cargo conventions.

Enormous emphasis has been placed on analyzing UN treaties; little scholarship, however, has been devoted to the harmonization of the maritime transport regime under the WTO. Moreover, there has been no literature looking at the WTO’s capacity to address issues of harmonizing sea transport.

Due to wide participation and a center-administered implementation system, the WTO can make up these two pitfalls of the current UN approach to harmonization – restricted scope of coverage and the lack of central administration in implementation. The aim of this paper is to refocus on the WTO. The paper will examine the feasibility of harmonizing international sea transport regimes through cooperation between the UN and the WTO in the following three sections:

Section II will briefly compare and contrast the UN system

---

and the world trading system from the perspective of sea cargo transport.

Section III will demonstrate the feasibility of the harmonization of the sea transport regime under the WTO without prejudice to the UN’s respective conventions. The WTO has successfully harmonized the intellectual property (IP) regime that is similar to sea transport law, as they have five aspects in common. Thus, a successful precedent from the “Trade-Related Aspects of Intellectual Property Agreement” (TRIPS) sheds light on the unification of sea transport law under the world trading system. Accordingly, an approach of selective reference, in which the WTO cooperates with the UN and unifies the IP regime, will fulfill the task of harmonizing maritime transport law.

With respect to the historical connection between the WTO and sea transport, Section IV will argue that the maritime transport negotiations at the WTO negotiating forum does not start from a zero basis. Section IV will further evaluate the history of WTO maritime transport related negotiations under the “General Agreement on Trade in Services” (GATS), produce progress upon which further negotiations can be built on, and identify setbacks that was problematic and that needed to be amended in further negotiations.

II. COMPARISON OF TWO APPROACHES TO UNIFY TRANSPORT LAW: THE WTO AND THE UN

A. Multi-Forums of Shipping Related Negotiations and the Need to Harmonize

Although they are two independent organizations, the WTO and the UN actively connect to each other. The emergence of the world trading system can be traced back to 1947. In that year, the UN’s Conference of Trade and Employment adopted the Havana Charter for the International Trade Organization (ITO) that aimed to establish a multilateral trade organization. Although the ITO never came into force, the Havana Charter was partially integrated into the WTO.

Furthermore, the cooperation between the two organizations is deeply rooted in the WTO agreements. In general, the legal basis of the WTO-UN relation is governed by the “Arrangements for Effective Cooperation with Other Intergovernmental Organizations-Relations between the WTO and the UN.” Additionally, the GATS and GATT, two cardinal components of the WTO Agreements, specify collaborative relationships with other international organizations, which provide

23 Compare id. with GATT, supra note 2. (The chapter on Commercial Policy within the Havana Charter was integrated into the GATT (1948) system).

24 Arrangements for Effective Cooperation with Other Intergovernmental Organizations-Relations between the WTO and the United Nations, available at http://www.wto.org/english/thewto_e/coher_e/wto_un_e.htm, (governing the WTO-UN relation, which was signed on 15 November 1995 in the same year as the WTO established).

25 See GATS, supra note 17, art. XXVI (providing “The General Council
the legal basis for the cooperation with the UN and its specialized agencies on shipping.

In considering the multi-forum maritime transport, it is worthwhile to boost further cooperation. There are a number of UN specialized agencies handling shipping issues.26 The United Nations Conference on Trade and Development (UNCTAD),27 Organization for Economic Co-operation and Development (OECD),28 and United Nations Economic and Social Council (ECOSOC)29 have published statistical data on the shipping industry for years.30 These are considerable resources of background information for further GATS-based maritime transport negotiations. For example, UNCTAD has published “The Review of Maritime Transport” yearly since 1968.31 Moreover, the International Labour Organization (ILO), the United Nations Commission on International Trade Law (UNCITRAL),32 and the International Maritime Organization

shall make appropriate arrangements for consultation and cooperation with the United Nations and its specialized agencies as well as with other intergovernmental organizations concerned with services.”); see also GATT, supra note 2, art. XXXVI(7) (stating “There is need for appropriate collaboration between the CONTRACTING PARTIES, other intergovernmental bodies and the organs and agencies of the United Nations system, whose activities relate to the trade and economic development of less-developed countries.”).

(IMO)\textsuperscript{33} deal with various aspects of shipping, for example, seamen,\textsuperscript{34} the international sea cargo regime,\textsuperscript{35} and international sale of goods.\textsuperscript{36} Amongst these specialized agencies, the Working Group III (on transport law) of UNCITRAL mainly works on the harmonization of the sea cargo regime\textsuperscript{37} with the assistance of a private international organization - the Committee Maritime International (CMI).\textsuperscript{38}

On the other hand, the WTO possesses two advantages over other forums on reinforcing harmonization of shipping regimes.\textsuperscript{39} This study focuses on the sea cargo regime and UNCITRAL, but the proposed way of cooperation in this paper might be extended to other respective shipping areas. First, the nature of legal documents administered by UNCITRAL and by the WTO is dramatically distinct. Most WTO agreements (including the GATS and TRIPS) are multilateral and legally binding for all members,\textsuperscript{40} but the UNCITRAL-administrated conventions can be regarded as plurilateral agreements.\textsuperscript{41} Unlike multilateral agreements, the category of plurilateral agreements is optionally applicable to UNCITRAL negotiating

\textsuperscript{34} See id.

Wiswall, A Brief History, COMITÉ MAR. INT'L, http://www.comitemaritime.org/A-Brief-History/0,27139,113932,00.html (2010) (The CMI drafted the Rotterdam Rules for the UNCITRAL Working Group III).

\textsuperscript{39} This study focuses on the sea cargo regime and UNCITRAL, but the cooperation might be extended to other shipping areas.

\textsuperscript{41} Jerome H. Reichman, Universal Minimum Standards of Intellectual Property Protection under the TRIPS Component of the WTO Agreement, in INTELLECTUAL PROPERTY AND INTERNATIONAL TRADE: THE TRIPS AGREEMENT 23, 29 & n.39 (Carlos M. Correa & Abdulqawi A. Yusuf eds., 2d ed. 2008) (discussing the difference between plurilateral and multilateral agreements. The term “plurilateral agreement” is used in the WTO. Unlike a multilateral agreement, a plurilateral agreement implies that WTO members would be given the choice to agree to new rules on a voluntary basis.).
countries on a voluntary basis, and is only binding for those members who ratify the treaties.\textsuperscript{42} Moreover, UNCITRAL has also adopted additional legislative techniques in modernizing and harmonizing the law of international trade.\textsuperscript{43} Several different types of legislative texts are used on the basis of its mandate, including conventions, model laws, legislative guides and model provisions.\textsuperscript{44} Among these legislative texts, only the conventions are binding.\textsuperscript{45} As the maritime transport regimes, The Hague,\textsuperscript{46} Visby,\textsuperscript{47} Hamburg\textsuperscript{48} and Rotterdam Rules\textsuperscript{49} do not automatically apply to their negotiating countries, and their applications reply on ratifications.\textsuperscript{50}

In contrast, the second category of multilateral treaties consists of agreements that are compulsorily binding on all members, and WTO agreements mainly belong to this category.\textsuperscript{51} Thus, a WTO-based maritime transport regime is legally binding and likely to be applicable to all WTO Members.\textsuperscript{52} Due

to all WTO Agreements being a single package,53 both substantive norms within the GATS and its procedural enforcement system will apply to all Members. The nature of a WTO-administrated maritime transport annex is if a uniform sea cargo regime is part of the annex, it is a multilateral agreement and is significantly different from The Hague, Visby, Hamburg, and Rotterdam Rules.54

The WTO has built up the widest coverage of Members and application of scope.55 Governing over 161 Members, the WTO engages in over 90 percent of all international trade in goods and services.56 It is comprehensive in the composition of its membership, including all developed countries and almost all developing countries.57 There are few other legal frameworks that are better at promoting the multilateral negotiations on the trade of goods and related maritime transport services. The WTO framework covers the broadest spectrum of Members and almost all stages of development of economic entities from developed nations to less developed countries.58 Therefore, a WTO-based maritime transport agreement will likely become binding for all WTO Members globally.59

Due to its minimal political image, the WTO has earned great prestige over the developing world.60 In order to establish the WTO as a unified institution under the WTO Agreements, there were a variety of clearly unanswered issues after the conclusion of the Uruguay Round of negotiations.61 These issues entailed further negotiations on services62 and greater integra-

tion of developing countries, as well as monitoring of the WTO rules to ensure fair treatment of these countries the problem of integrating the “economies in transition” into the WTO system, and facing up to the problem of “state trading” entities.

B. Harmonization: WTO’s Liberalization and UN’s Unification

Both the UN and the WTO aim at the harmonization of the maritime transport regime, but each does so with different focuses. The UN stresses the unification of the sea cargo regime. As seen from the full name of the Hague Rules, the UN harmonization is targeted at establishing and updating universal rules for a wide range of countries. The WTO emphasizes Members’ deeper commitment in existing sectors to achieve further liberalization. Meanwhile, the WTO does not intervene in its Members’ regulatory autonomy over quality control of services supplied and the standardization of the service regulation worldwide. Both the WTO and the UN try to adjust diverse levels of domestic regulations to universal levels set by them. The UN’s unification and the WTO’s harmonization are both targeted towards global application and the level of standardization affects whether the scope of application could become global or not. Therefore, the harmonization of

71 See Rotterdam Rules, supra note 5; see Hague Rules, supra note 6; see Visby Rules, supra note 7; see Hamburg Rules, supra note 8 (showing the status of the Hamburg and Rotterdam Rules, in comparison with the numbers of
the UN and of the WTO faces a question: which levels of the standardization should be imposed on the UN’s unification and the WTO’s liberalization? In general, the standard of unification on limiting freedom of contract should be relatively low; in contrast, the standard of the WTO’s liberalization seems to be higher.\footnote{Alberto Bercovitz, Copyright and Related Rights, in Intellectual Property and International Trade: The TRIPS Agreement 125-145 (Carlos M. Correa & Abdulqawi A. Yusuf eds., 2nd ed. 2008).}

Nonetheless, the standardization is harmonized at different levels under unification and liberalization. The level of unification of the different cargo regimes is balanced between low and high levels and regards the scope of application and liability. Additionally, the level for liberalization sets the standard at a relatively high level requiring removing unnecessary regulations, but the high standards are achievable through progressive liberalization.\footnote{See GATS supra note 17, Part IV.} Moreover, both targets of liberalization and unification can be achieved under the WTO framework. According to GATS Preamble, the WTO’s liberalization of shipping markets can be achieved without prejudice to UN’s unification of the sea cargo regime.\footnote{See GATS supra note 17 pmbl.} In practice, TRIPS proves that the WTO is capable of unifying different domestic regulations and liberalizing markets in one go.

III. COOPERATION BETWEEN THE WTO AND THE UN: FROM INTELLECTUAL PROPERTY TO TRANSPORTATION

The WTO is setting a creative precedent to include IP regimes into the world trading system through TRIPS.\footnote{See WTO supra note 15.} This precedent opens a door for individuals’ private rights to be merged into the WTO system. Taking into account the four aspects that IP shares with maritime transport, it is feasible to include maritime transport in the TRIPS’s counterpart GATS. First, TRIPS and the GATS are Annexes 1B and 1C at the same level of the pyramid of the WTO Agreements.\footnote{See WTO, supra note 15; see also WTO Legal Texts, infra note 82 (showing the relationship of these Agreements in the chart on Annex 1B and Annex 1C).} Second,
the implementation of TRIPS and the GATS are both safeguarded by the WTO’s Dispute Settlement Understanding at an international level.\textsuperscript{77} Third, both the IP and sea transport liability regimes are concerned with balancing rights and obligations between private entities, such as rights holders and late comers in IP,\textsuperscript{78} and the hull and cargo interest individuals and companies in the sea transport.\textsuperscript{79} Fourth, both regimes came into being before the establishment of the UN,\textsuperscript{80} and there were respective international conventions prior to the UN conventions.\textsuperscript{81} Addressing the relationships between the pre-UN conventions and the UN-administered conventions under TRIPS was an unavoidable task for IP harmonization. Likewise, the GATS will provide a vehicle for harmonizing the maritime transport regime, which entails addressing the relationships between previous conventions, including the UN-administered conventions. On account of the four shared merits of IP and maritime transport, five successful aspects of IP’s inclusion will be investigated in depth to shed light on maritime transport’s inclusion into the WTO/GATS.

The Figure above illustrates the umbrella-shape of the WTO and the single-package concept.82

A. Cooperation between the UN agencies and the WTO: WIPO and Council for TRIPS; UNCITRAL and Council for Trade in Services

Patents and copyrights are two primary intellectual property regimes.83 By the end of the nineteenth century the “Paris Convention for the Protection of Industrial Property” (the Paris Convention)84 and the “Berne Convention for the Protection of Literal and Artistic Works” (the Berne Convention)85 had been created to provide protection on the two categories of IP rights at the transnational level.86 Both treaties and their revisions are administered by a United Nations special agency – the World Intellectual Property Organization (WIPO).87 Although revised, these pre-GATT conventions on IP rights did not develop as quickly as did the advent of the digital age.88 The new circumstance89 entailed the emergence of an appropriate inter
national instrument that satisfied the technology creators.\textsuperscript{90}

Although the discrepancies between the developed and developing world on IP rights-protection were aggravated,\textsuperscript{91} it was increasingly recognized as the justification for harmonizing the conflicts of international rules.\textsuperscript{92} Even though the United States (US) and the European Community (EC) proposed a draft agreement on measures to discourage the importation of counterfeit goods before the world trading system,\textsuperscript{93} the proposal had not been adopted at the Tokyo Round;\textsuperscript{94} however, the proposal triggered discussions for the adoption of TRIPS in the world trading system through the early 1980’s and the Uruguay Round.\textsuperscript{95} As a result, the WTO became another institution, besides the WIPO, administrating the IP regime under TRIPS. Thus, subsectors of the IP regime, including the patents, copyrights and respective IP rights, have been integrated into TRIPS since the Uruguay Round.

In light of the WIPO-and-TRIPS case, this proves that an area that is traditionally administrated by the UN can be adjusted by the WTO system. It also proves that the WTO can collaboratively cope with pre-existing conventions, including the UN-administrated conventions. A WTO-based maritime transport regime can coexist with pre-UN treaties and deal with the harmonization of respective treaties together with the UN approach. The area of IP rights was traditionally administrated solely by the WIPO and maritime transport before the Uruguay Round negotiations was also administrated only by the UN agencies. Nevertheless, TRIPS has added some more ingredients to the IP negotiation forum and enforcement at the WTO under the Council of TRIPS, which justifies considering

\textsuperscript{93} Yusuf, \textit{id.}, at 7.

\textsuperscript{95} Yusuf, \textit{supra} note 86, at 7.
the possibility of maritime transport being governed by both systems. In addition, a GATS-based maritime transport annex will make the regime apply to all WTO members, which will make the maritime regime applicable worldwide as an IP regime under TRIPS.

B. The Conversion of UN-administrated Treaties into the WTO Agreements through Selective References: TRIPS and the GATS

The TRIPS Agreement permits the enforcement of existing instruments on IP rights, as long as such instruments were not a restriction on international trade in disguise. The TRIPS approach is permissive but cautious towards IP regulatory measures hindering free trade and competition. Thus, appropriate levels of regulation for example, the carrier’s liability under the UN treaties may be integrated into the GATS and applicable at the worldwide level as long as they contain no hindrance on liberalization and competition.

IP and sea transport conventions came into being before the establishment of the UN and the world trading system. Under the TRIPS Agreement and some pre-GATT, exist-

---

96 See GATT, supra note 2 at Art. XX(d) (explaining, “General Exceptions” stipulates “Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of measures: […] (d) necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement, including those relating to customs enforcement, the enforcement of monopoly operated under paragraph 4 of Article II and Article XVII, the protection of patents, trademarks and copyrights, and the prevention of deceptive practices”); see Yusuf, supra note 86, at 8.

97 See Reichman, supra note 91, at 795-96 (noting, an paradox of the GATT approach on regulations and free markets that the industrialized countries with free domestic markets hoped to impose a highly regulated market on intellectual goods on the rest of the world, and the developing countries with restrictive free market preferred a totally unregulated international intellectual property regime); see Yusuf, supra note 86, at 8.

98 See, e.g., Hamburg Rules, supra note 8, at arts. 5, 6, and 8; Rotterdam Rules, supra note 5 arts. 17, 24, 59, 60 & 61.

99 See generally Hague Rules, supra note 6; Visby Rules, supra note 7.

100 See TRIPS Agreement, supra note 15.

101 The GATT system was founded in 1947 and replaced by the WTO in 1995 after the Uruguay Round negotiations; see The GATT Years, supra note 2.
ing IP conventions are creatively incorporated into the WTO framework by selective reference. These previous international regimes embrace the Paris Convention (1967 reversion), Berne Convention (1971 reversion), the “Washington Treaty on Intellectual Property in Respect of Integrated Circuits” (IPIC), and the “Rome Convention for International Convention for the Protection of Performers, Producers of Phonograms and Broadcasting Organizations” (Rome Convention). However, a number of pre-existing IP conventions have not been incorporated into TRIPS. For instance the “International Convention for the Protection of New Varieties of Plants” (UPOV), and WIPO “Copyright Treaty” (WCT), the WIPO

102 See generally TRIPS Agreement, supra note 15, arts. 2, 9 & 35 (stating, “1. In respect of Parts II, III and IV of this Agreement, Members shall comply with Articles 1-12 and 19 of the Paris Convention (1967). 2. Nothing in Parts I to IV of this Agreement shall derogate from existing obligations that Members may have to each other under the Paris Convention, the Berne Convention, the Rome Convention and the Treaty on Intellectual Property in Respect of Integrated Circuits”. TRIPS Agreement Article 9, “Relation to the Berne Convention,” reads as, “1. Members shall comply with Articles 1 through 21 of the Berne Convention (1971) and the Appendix thereto. However, Members shall not have rights or obligations under this Agreement in respect of the rights conferred under Article 6 of that Convention or of the rights derived there from. 2. Copyright protection shall extend to expressions and not to ideas, procedures, methods of operation or mathematical concepts as such.”. TRIPS Agreement Article 35, “Relation to the IPIC Treaty,” reads as, “Members agree to provide protection to the layout-designs (topographies) of integrated circuits (referred to in this Agreement as “layout-designs”) in accordance with Articles 2 through 7 (other than paragraph 3 of Article 6), Article 12 and paragraph 3 of Article 16 of the Treaty on Intellectual Property in Respect of Integrated Circuits and, in addition, to comply with the following provisions.”.

103 Paris Convention, supra note 84 (Its latest revision is under the WIPO administration but not WTO/TRIPS.).

104 Berne Convention, supra note 85. (Its latest revision is under the WIPO administration but not WTO/TRIPS.).

108 See WIPO Copyright Treaty, Dec. 20, 1996,
“Performances and Phonograms Treaty” (WPPT). In addition, only some articles of these aforementioned conventions and only some of these specific revised versions and not the latest revision, are incorporated into the WTO/TRIPS. It is not unusual for treaties of a technical character to be amended or revised often. But, the Paris and Berne Conventions have been revised several times. TRIPS, however, does not refer to the latest version, but to a specific revision of them.

The “selective referencing approach” has a backwards looking, threefold merits: a selective revised version, selected predecessor conventions, and selective articles within such a convention. In this way, parts of a number of earlier IP conventions, for example the Paris Convention (1967 version) and Berne Convention (1971 version), are made applicable through TRIPS to WTO Members, which might not adopt these conventions. Due to the broad coverage of the WTO membership, TRIPS indirectly extends the applicable coverage of

110 See TRIPS Agreement arts. 3.1, & 4(b). National treatment and the most-favoured-nation clauses apply only to those rights under the Rome Conventions that the TRIPS Agreement selectively provides, but not to rights generally flowing from that Convention.

112 See TRIPS Agreement, arts. 2, 9 and 35.

113 Cf Jerome H. Reichman, The Know-How Gap in the Gap in the TRIPS Agreement: Why Software Fared Badly, and What Are the Solutions, 17 Hastings COMM. & ENT. L. J. 763, 765 (1995) (arguing both the strengths and weaknesses of the TRIPS Agreement stem from its essentially backwards-looking character: on one hand, the TRIPS traced back to the earlier conventions; on the other hand, it also leaves gaps and loopholes, especially in non-traditional objects of intellectual goods, such as computer programs and biotechnology). See also Reichman, supra note 41, at 43 (discussing the shortcomings of backwards looking character on computer programs and electronic information tools in information age).

114 Yusuf, supra note 86, at 20-21 (analysing the relationship between TRIPs and the Intellectual Property Conventions on the basis of these two articles, and he argues the twofold aims of the articles are first to incorporates the pre-existing conventions into the TRIPs Agreement and to express the intention of the WTO parties to TRIPS Agreement to maintain in force the obligations which member parties to related earlier conventions may have to each other under the provisions of these conventions).

115 There have been 161 WTO members by 26 April 2015; see WTO Membership, WTO.
these pre-GATT IP conventions.\textsuperscript{116}

The selective referencing approach helps TRIPS avoid potential conflicts with former international treaties and with the UN to a large extent. TRIPS expresses an intention to maintain in force the obligations that WTO Members already have under the earlier conventions.\textsuperscript{117} Such a clear declaration is important in successive treaties governing the same subject matter, especially in the case that any two treaties are binding upon a different group of parties.\textsuperscript{118} This intention is to maintain the obligations already in force and to avoid the conflicting obligations for a WTO member, which already ratifies a pre-existing convention.\textsuperscript{119} Therefore, a Member to an earlier treaty and another Member that had contracted to both the treaty and TRIPS are subject to all the provisions of the treaty.

Concerning shipping regimes, the selective referencing approach will reduce conflict with the Members of earlier treaties and make a respective regime under the GATS feasible. There are two important effective conventions with respect to sea-borne cargo carriage: The Hague and Visby Rules. These were drafted before the 1970s,\textsuperscript{120} but they must be updated to keep up with technological changes after their conclusion.\textsuperscript{121} Containers had been used in shipping by the end of the late 1950s,\textsuperscript{122} and they become widely used in the 1970s.\textsuperscript{123} The sig-

\textsuperscript{116} TRIPS, as a multilateral agreement, make the referred conventions become part of the TRIPS Agreement itself and be applicable to all 161 WTO members. However, the number of countries, which ratified such a convention, is less than 161; see WIPO, supra note 111.

\textsuperscript{117} See TRIPS Agreement arts. 2.2 and 70. Article 2 entitled “Intellectual Property Conventions” states “2. Nothing in Parts I to IV of this Agreement shall derogate from existing obligations that Members may have to each other under the Paris Convention, the Berne Convention, the Rome Convention and the Treaty on Intellectual Property in Respect of Integrated Circuits.” Article 70.1 provides “This [TRIPS] Agreement does not give rise to obligations in respect of acts which occurred before the date of application of the Agreement for the Member in question.”

\textsuperscript{120} See generally Hague Rules, supra note 6; Visby Rules, supra note 7.

\textsuperscript{122} José Angelo Estrella Faria, Uniform Law for International Transport at UNCITRAL: New Times, New Players, and New Rules, 44 TEX. INT’L L.J.
significant step toward modernized shipping was achieved by the emergence of the container.\textsuperscript{124} However, these new situations have not been embodied in the Hague and Visby Rules.\textsuperscript{125} Even though the UN has tried to update sea transport regimes with this trend through the Hamburg Rules and Rotterdam Rules since the 1970s,\textsuperscript{126} these Rules have not been as widely adopted as their predecessors.\textsuperscript{127} Even though they have been updated,\textsuperscript{128} the Rotterdam Rules do not allow contracting countries to opt out of any chapter, which increases the difficulty in achieving widespread adoption.\textsuperscript{129} A possible way to make the best use of previous negotiations is to refer to Articles of these Conventions, no matter whether they are applicable or not to a WTO contracting Member, under a GATS annex, corresponding to the TRIPS precedent.

TRIPS negotiations have spawned a theory of balance, due to serving as a platform for bargaining and trade-off practice.\textsuperscript{130} This theory will be enlightening for sea transport regimes, because both IP and sea cargo transport regimes face the same situation of conflicts between interest groups and respective

\textsuperscript{124} Gelina Harlaftis & Ioannis Theotokas, Maritime Business During the Twentieth Century: Continuity and Change, in THE HANDBOOK OF MARITIME ECONOMICS AND BUSINESS 3, 7 (Costas Th. Grammenos ed., 2d ed. 2010).

\textsuperscript{129} Rotterdam Rules, supra note 5, art. 90 (stating that no reservations to the Convention are permitted).

\textsuperscript{130} See TRIPS Agreement, supra note 15, art. 7 (stipulating, “The protection and enforcement of intellectual property rights should contribute to the promotion of technological innovation and to the transfer and dissemination of technology, to the mutual advantage of producers and users of technological knowledge and in a manner conducive to social and economic welfare, and to a balance of rights and obligations.”); see also Reichman, supra note 41, at 33-36, 60-62, 152, 171, 187, 421.
countries, and both try to harmonize the conflicts through treaties. As to the TRIPS precedent, the WTO balanced the interests between the IP rights holders and consumers, and as between the developed world and latecomers of developing countries. Likewise, a sea transport regime needs to achieve a balance between exempt rights holders (carriers) and consumers (the cargo interests), and between the traditional maritime powers from the developed world and latecomers to international trade (i.e. developing countries). While developed countries were pursuing a high level of protection on their interests at the worldwide level, with numerous liability exemptions, an opposite trend was taking place in the developing world. In the context of pre-1970s patent and copyright protections, developed countries sought to protect IP rights at high standards. The United States started using the US Tariff Act to combat the infringement of United States patents by foreign enterprises at the domestic level. It also introduced, together with the EU, a draft agreement on measures discouraging the importation of counterfeit goods into the Tokyo

---

131 TRIPS balanced between IP rights holds from developed countries and consumers from developing countries. The sea cargo transport regime deals with the carriers from traditional shipping powers from Europe, e.g. Great Britain, Greece, and Norway, and cargo export country outside Europe, such as China.

132 TRIPS Agreement, supra note 15, art. 7. The Rotterdam Rules state in Preamble that “Reaffirming their belief that international trade on the basis of equality and mutual benefit is an important element . . . Convinced that the progressive harmonization and unification of international trade law . . . significantly contributes to universal economic cooperation among all States on a basis of equality, equity and common interest, and to the well-being of all peoples . . .”.

Round of multilateral negotiations. Conversely, developing countries sought to obtain the allowance of parallel imports, a greater scope for compulsory licensing, and less restrictive copyright protection in order to benefit local social welfare and knowledge distribution.

In the 1970s, developing countries tried to obtain more flexibility in the IP rights regime. For instance, the developing countries stimulated the revisions of the Paris Convention and the Berne Convention under the WIPO’s administration.

Although there were divergent expectations about levels of regulation, views began to converge during the WTO and TRIPS negotiations. The GATT connection to IP was insisted upon first by the developed countries, not because of a belief that the strengthening of IP rights protection would further liberalize international trade, but as a bargaining chip for the access of developing countries’ products to the markets of developed countries.

On the other hand, the developing countries themselves gradually perceived the GATT-based multilateral negotiations as a lesser evil than bilateral concessions, due to the fact that it led to trade-offs between the more greatly protected intellectual goods and market access of other goods from the developing world, such as agriculture, textiles and tropical products, to the industrial countries.

As a result, a group of fourteen developing countries submitted a detailed proposal on TRIPS, which consisted of their views on the content and level of the standards on IP protec-

146 Id.

147 Id. at 9; Agreement on Measures to Discourage the Importation of Counterfeit Goods, GATT Doc. L/4817 (July 31, 1979).

The submission of this proposal heralded the acceptance of a GATT-based standard-setting approach in IP protection by the developing world. Thus, the WIPO administers IP negotiations in a way that focuses on the countries' arguments for or against the higher level of protection of IP rights. Unlike the UN's WIPO approach, the trade-off bargaining happened to the TRIPS-based multilateral negotiations within the overall WTO framework. Therefore, the WTO is capable of engaging both the developed and developing world, allowing them to bargain with each other.

Moreover, interest groups can have access to negotiations and derive profits from harmonization of IP and of sea transport, respectively, within the WTO system. The access to negotiations is a way for developing countries to take part in the rule making process, while developed countries can derive profits from TRIPS. TRIPS successfully imposes levels of protection, through imposing minimum standards on patents, especially on the criteria of eligibility and duration. These protections have not been addressed under the Paris Convention.

Meanwhile, developing countries can gain bargaining chips in the sector of goods, services and IP. For example, they

150 See e.g. Yusuf, supra note 86, at 9; Reichman, supra note 41, at 25.
154 BENJAMIN PARAMESWARAN, THE LIBERALIZATION OF MARITIME
used IP protection as a bargaining chip in exchange for better negotiating positions in other areas, such as trade in goods under GATT or trade in services under the GATS. In this way, developed countries maintain certain high standards, but the developing countries successfully were also spared some limitations, such as compulsory licensing, and parallel importing. The incorporated Berne Convention (1971) and its appendix of preferential measures puts limits on the rights holders from the developed world by enabling nationals of the developing countries to secure non-exclusive compulsory licenses on favorable terms. It is a compromise and the limitation is also qualified. For example, TRIPS addresses the scope of copyright protection by echoing the Berne Convention (1971), confining the limitation or exceptions.

In light of TRIPS, the WTO provides a bigger negotiating forum with trade-off practices to foster harmonization on sea transport. TRIPS allows IP to be connected to other WTO covered areas of trade under the GATT or GATS such as, agriculture, textiles and tropical products. Therefore, the negotiations of a higher standard of IP protection supported by industrialized countries gave the developing countries bargaining chips in such areas as agriculture, textiles, and tropical products. Similarly, the GATS provides maritime transport with a range of bargaining opportunities under other areas covered by the GATS, GATT and TRIPS between different in-

TRANSPORT SERVICES: WITH SPECIAL REFERENCE TO THE WTO/GATS FRAMEWORK 252-53 (2004) (describing different bargaining chips available to developing countries under GATT, TRIPS and other service sectors under the GATS).

161 PARAMESWARAN, supra note 154; see also Marrakesh Agreement, supra note 4; GATT, supra note 2.
terest groups and respective countries.  

Similar conflicting groups compete under TRIPS and in maritime transport negotiations. The majority of maritime powers are Western developed countries who have established exempt rights for carriers through earlier treaties. In contrast, developing countries accommodate a great number of shippers and cargo interest groups, but they are latecomers to international trade and transport. As latecomers, the developing countries had to abide by previous sea transport conventions and were unable to amend the established rules that were unfriendly to them. Facing these conflicts, the WTO enables the GATS to balance rights and interests between developed and developing worlds, between traditional shipping powers and new born hull-interest representative countries from the otherwise developed and developing world, and between the hull and the cargo interest groups. Therefore, if the WTO initiates special negotiations on maritime transport, the TRIPS balancing theory and trade-off practices may apply to shipping areas and promote its harmonization.

**D. Universal Regulation on Minimum Standards: From IP Protection to the Levels of Carrier’s Liability**

The level of regulations, which are seen in the form of minimum standards, result from balancing rights through negotiations. The absorption of pre-GATT IP regimes into the world trading system entails the introduction of universal min-

imum standards on IP protection into TRIPS. The levels are explored through balancing the relations between innovators and latecomers in an integrated world market. Based on the principles of national treatment and the mostfavoured-nation provision, WTO Members must accord to the nationals of other Members. These international minimum standards of IP protection are comprised within the treatment provided for in TRIPS agreement. One component of these TRIPS na-
tional and equal treatments constitutes the selective parts of the Paris Convention (1967), Berne Conventions (1971) and of the IPIC Treaty. The other component consists of minimum standards that the TRIPS agreement creates irrespective of earlier instruments. Either way, the relevant standards are binding on all Members.\textsuperscript{179}

The developed countries achieved their goals\textsuperscript{180} in TRIPS to elevate and harmonize minimum standards in several areas that had been established previously.\textsuperscript{181} With regard to patent protection, the Paris Convention strengthened the IP protection (1967).\textsuperscript{182} A WTO member has to respect a previous convention referred and abide by the universal minimum standards within the convention, even if it has not ratified the earlier convention.\textsuperscript{183} The only possibility for deviation from the universal standards of patent protection is that a WTO Member is in a transition period, being either a developing country or a least-developed country.\textsuperscript{184} The notion of transition gains wider acceptance for the WTO particularly from the developing nations.\textsuperscript{185} Also, TRIPS augments the minimum standards of protection for other areas of IP, including the trademark and

---

Rights); Reichman, \textit{supra} note 41, at 26-30.

\textsuperscript{185} TRIPS Agreement, \textit{supra} note 15, arts. 65-67 (providing privileges for developed countries).
geographical indication of origin.\textsuperscript{186} As to copyright protection under the Berne Convention, TRIPS incorporates most but not all of the minimum standards set out in this earlier convention, \textsuperscript{187} adding certain additional standards of its own \textsuperscript{188} and begins the task of harmonizing the protection of neighboring rights. \textsuperscript{189} Nonetheless, TRIPS qualified the scope of areas subject to minimum standards. For instance, TRIPS excludes the compulsory license provisions of the IPIC Treaty from the list of mandatory international minimum standards.\textsuperscript{190}

TRIPS practices regarding minimum standards shed light on the WTO efforts to establish minimum standards on transport services under GATS. Both IP and services are invisible outputs, which are qualitatively different from physical goods.\textsuperscript{191} In order to ensure information symmetry on the quality of services, it is necessary to establish certain instruments through government actions.\textsuperscript{192} Especially in the case of liner shipping and engagements of small shippers, legal instruments on the levels of carriers’ minimum liability will protect the consumers from relatively bigger carriers’ abuse of standard contracts and immunity clauses.\textsuperscript{193} Within the WTO system, the maritime transport as a service sector falls within the scope of the GATS, which is a parallel counterpart of GATT and TRIPS.\textsuperscript{194}

\textsuperscript{190} TRIPS Agreement, \textit{supra} note 15, arts. 35-38.
\textsuperscript{192} \textit{Id.}
\textsuperscript{193} Hans-Bernd Schäfer and Claus Ott, \textit{Freedom of Contract, Contract Law and the Fully Specified Contract}, in The Economic Analysis of Civil Law, at 273-285 (Edward Elgar ed., 2004), (arguing freedom of contract is “the basis upon which a properly functioning competitive economy that directs resources to the highest value use is grounded”, but the market failure entails government action to restrict the abuse of this freedom. The bills of lading are the standard contracts of carriage of goods by sea that are widely used in liner shipping).
\textsuperscript{194} See Marrakesh Agreement, \textit{supra} note 4; see generally Jackson, \textit{supra} note 40; Reichman, \textit{supra} note 41.
Moreover, the WTO principles do not conflict with TRIPS and the GATS creating minimum standards. The objective of the GATS is to liberalize trade-in services rather than to deregulate services. The liberalization of markets entails the removal of the regulations that causes harm in such a free and competitive market. However, a service sector can benefit from certain regulations. GATS Article VI specifically provides qualification requirements and procedures, technical standards and licensing requirements recognizing “the right of Members to regulate and to introduce new regulations, on the supply of services within their territories in order to meet national policy objectives.” In fact, this Article does not set standards for a service sector, nor does it provide for the review of national standards. It instead aims to increase transparency, which means access to being informed of regulations, standards and procedures for licensing or obtaining qualifications. However, the GATS has not set any standard for service quality so far. Additionally, the GATS does not require a WTO Member to submit any national instruments for review by other Members. What the GATS requires is that its Member be able to demonstrate that a given measure is not more trade-restrictive than necessary in the event of a dispute with another Member. Therefore, the GATS may follow the TRIPS levels of IP protection to establish levels for sea transport ser-

vices, for example, the level of carriers’ minimum liability.\textsuperscript{205}

\textbf{E. Enforcement and Dispute Settlement Mechanism: the TRIPS, GATS and DSU}

Traditionally, international trade rules are enforced under either decentralized or centralized paradigms.\textsuperscript{206} The pre-WTO IP regimes (the Berne Convention\textsuperscript{207} and Paris Convention\textsuperscript{208}) seemed to take both approaches. They allow disputes to be brought before both national courts and the International Court of Justice.\textsuperscript{209} However, the disputes brought before the International Court of Justice are only theoretically possible.\textsuperscript{210} Thus, the central approach to file cases before the World Court became a problem in practice.\textsuperscript{211} There was no invoked litigation against the deviation from the agreed minimum standards, because it seemed like an unfriendly act.\textsuperscript{212} The sea transport regimes merely apply in a decentralized way in which contracting countries ratify a convention and incorporate it into national legal system.\textsuperscript{213}

\begin{footnote}
205 E.g. Rotterdam Rules art. 17 Basis of Liability [of the Carrier], art. 59 Limits of Liability [of the Carrier], and art. 60 Period of Time for Suit. The GATS may selectively refer to part of the Rotterdam Rules, the Hague, Visby or Hamburg Rules, to impose minimum liability on the carrier so as to guarantee the minimum level of quality of transport services.
206 Jonathan T. Fried, \textit{Two Paradigms for the Rule of International Trade Law}, 20 CAN.U.S. L.J. 39 (1994) (contrasting centralized model of European Union which relay on supranational enforcement of European Court of Justice with the decentralized model of the North American Free Trade Agreement that depends on the judicial systems of Members); see also Jerome H. Reichman, \textit{supra} note 41, at 63.
207 Paris Convention, \textit{supra} note 84, at art. 28
208 Berne Convention, \textit{supra} note 85, at art. 33
209 These conventions allow the contracting countries to deal with disputes at national judicial systems, and disputes can also be brought before the International Court of Justice.
210 See Paris Convention, \textit{supra} note 84 at article 28; Berne Convention, \textit{supra} note 85, at art. 33. The International Court of Justice works as a world court, but it deals with relations between public rights instead of intellectual property rights and contract issues of maritime shipment; see also, International Court of Justice, \textit{Cases}, \url{http://www.icj-cij.org/homepage/index.php}, last accessed 19 February 2013.

\(^{220}\) Id.
IV. TRANSPORTATION AND THE WTO/GATS: LESSONS LEARNT FROM PROGRESSION AND REGRESSION

The harmonization of liberalizing maritime transport services and unifying maritime transport related regulations can be jointly negotiated under the WTO. To begin with, the WTO has successfully assumed the twin tasks under TRIPS. Moreover, the liberalization does not prevent the GATS from harmonizing the seaborne cargo regime of regulations. The past sea transport negotiations under the GATS mainly targeted harmonizing the levels of liberalization of shipping markets. The international regulations which are not competition distorting do not contradict liberalization. Thus, the GATS does not forbid harmonizing the different international regulations. Last but not least, the harmonizing of liberalization and of sea cargo regime/regulation engaged the same negotiating groups of countries (or territories). The tendency of liberalization in the international maritime transport area is also to produce a pattern of balancing and harmonizing countries with different transport interests. Whilst developed countries with renowned merchant fleets were pursuing the high level of liberalization worldwide, an opposite trend took

221 See supra Sec. III (D).
222 See GATS, supra note 17, at Preamble, ¶ 3-4 (providing “Desiring the early achievement of progressively higher levels of liberalization of trade in services through successive rounds of multilateral negotiations aimed at promoting the interests of all participants on a mutually advantageous basis and at securing an overall balance of rights and obligations, while giving due respect to national policy objectives; Recognizing the right of Members to regulate, and to introduce new regulations, on the supply of services within their territories in order to meet national policy objectives and, given asymmetries existing with respect to the degree of development of services regulations in different countries, the particular need of developing countries to exercise this right.”).
224 Council for Trade and Services, Maritime Transport Services: Background Note by the Secretariat, S/C/W/315 (Jun. 7, 2010). The maritime countries or territories are divided into three categories: the hull dominated countries, the cargo-interest dominated countries, and the hybrid interests countries. A great number of countries belong to the third category.
225 Id. at ¶27.
226 Id. at ¶¶21-27.
place in the developing world with a prosperous export trade in goods but an infant shipping industry. Harmonization becomes more complex in comparison with other industries due to a distinct interest group of third-country transport. Hence, the WTO will be a feasible negotiating forum to further harmonize liberalization and sea-cargo regulations.

Sea transport has gained a prominent role in the WTO negotiating agenda under the GATS, along with IP under TRIPS, and maritime related service is an area on which WTO negotiations were scheduled under the GATS. Since the Uruguay Round Negotiations, the international trade-in services have been included in the WTO negotiations along with IP. The relationship between sea transport and the WTO can be traced back from the Uruguay Round till the current Doha Round.

As Sturley commented, history is already repeating itself and there are lessons to be learnt from it; thus, many of today’s arguments stem three decades or more. The lessons to be learned from past maritime transport negotiations on liberalization are not only enlightening for the WTO, but for as broad as all the treaties concerning maritime transport (including UN treaties), because of same negotiating countries and same respective interest groups these countries represent. In light of progress and regress, experience in this part sheds light on the harmonizing of entire maritime transport treaties.

Trade in services was one of the novel issues in comparison with trade in goods under the world trading system. The service issues were introduced into the world trading system (now the WTO) by the United States over the strenuous objections from both the developing and developed world. Services sectors were officially included in the multilateral negotiations of world trading system for the first time during the Uruguay Round negotiations. The negotiations on services were also separately structured from that on goods. This clear division highlights the importance of services and reduces the trade-offs risks between goods and services. It is worth noting that the negotiations on trade in services were accommodated in an independent multilateral discussion forum on the trade of goods.

The maritime transport negotiations need to address the trade-off problems amongst services sectors. In the Uruguay Round, the conceptual framework for trade in services was defined by the Uruguay Round Agreements. The intellectual property rights (TRIPS) and trade-related investment measures (TRIMS) are also new issues besides the trade of goods under GATT.

234 GATT, Ministerial Declaration on the Uruguay Round, GATT/1396, (25 September 1986) (clearly distinguishing the trade in goods and trade in services in its Part I and Part II). The intellectual property rights (TRIPS) and trade-related investment measures (TRIMS) are also new issues besides the trade of goods under GATT.

236 GATT, supra note 234.

237 Id. Part II of the Ministerial Declaration on Uruguay Round of September 1986 as to negotiations on trade in services says, “Ministers also agree, as part of Multilateral Trade Negotiations, to launch negotiations on trade in services. Negotiations in this area shall aim to establish a multilateral framework of principles and rules for trade in services, including elaboration of possible disciplines for individual sectors, with a view to expansion of such trade under conditions of transparency and progressive liberalization and as a means of promoting economic growth of all trading partners and the development of developing counts. [...] GATT procedures and practice shall apply to these negotiations.

240 Id. at 101 (stating that “[A] Group on Negotiations on Services is established to deal with these matters”).
Round, the shipping industry strongly resisted the world trading system covering transport services.\(^{241}\) For instance, US shipping interests asserted that the inclusion of maritime transport services into the world trading system would be more harm than benefit.\(^{242}\) In contrast, a majority of countries supported a broad coverage in the negotiations of services, including maritime transport services.\(^{243}\) Additionally, the exclusion of maritime transport would cause domino effects through excessive claims from an increasing number of sectors requesting exclusion from the coverage.\(^{244}\) The debate came to an end with the invention of a dual approach to maritime transport negotiations.\(^{245}\)

The first progress in maritime transport negotiations is the introduction of the dual-approach. The dual approach was introduced by a “Group for Negotiations on Services” (GNS) meeting in 1990.\(^{246}\) Under this approach, sea transport negotiations were held at dual levels: being discussed in a general negotiation forum with all other service sectors at the one level, and a specific sectoral/sectional maritime transport negotiation forum at the other level.\(^{247}\) This approach had earned support

\(^{241}\) Uruguay Round - Group of Negotiations on Services, Report to the Trade Negotiations Committee Meeting at Ministerial Level, Montreal, December 1988, MTN.GNS/21, (Nov.25, 1988), (announcing the substantial negotiations were begun in December 1988).

\(^{243}\) See Uruguay Round Negotiations- Trade Negotiations Committee, Mid-term Meeting, MTN.TNC/11, Part II, (Apr.21, 1989) (stating a majority of member parities supported a universal approach which kept any particular services sector from being excluded from GATS coverage).

\(^{244}\) See OECD, supra note 242, at 2-3.

\(^{245}\) On Sep.25,1990, Chairman Waldemar Hoffmann of the Working Group on Maritime Transport Services reported to a GNS meeting, which generally concluded that a special sectoral/sectional maritime transport annex addressing this very special service sector was necessary, even though there had no consensus as to the exact contents of such an annex; see more in The Uruguay Round, Working Group on Maritime Transport Services, MTN.GNS/TRANS/6 (Nov. 30, 1990), at 1-2; WTO, Uruguay Round Doc. No. CC-TRAN2, Working Group on Maritime Transport Services-Reports of the Chairman, (Oct.19, 1990), at 1 (stating that there were different opinions on the very contents or formats of an annex on maritime transport regime).

\(^{246}\) Id.

\(^{247}\) GATT Secretariat, Multilateral Trade Negotiations the Uruguay Round - Group of Negotiations on Goods (GATT) Negotiating Group on Dis-
from many participating nations. These countries agreed to follow the dual approach to accommodate the need of a particular annex on maritime transport regime, where a specific sector would be regulated under the world trading system. As a result of the dual approach, the maritime transport became one of exclusively negotiated sectors and an avid trade-off negotiating problem. Sea transport was negotiated under the transport-specific sectoral/sectional negotiations with air, road and inland waterways. The other specific sectors were financial services and telecommunications, which were also related to sea-borne cargo trade. Therefore, this dual approach has beneficiary effects of expanding the participation of maritime negotiations and shrinking the trade-off problem.

Another progress is the supplementary mechanisms to solve disagreements. On the one hand, the bilateral negotiation was introduced to supplement the on-going of multilateral negotiations. Although the GNS tried to promote consensuses on a multilateral basis, the European Community and the United States had dramatic bilateral conflicts. As a result, the majority of the initial commitments submitted to the conference contained little or far from sufficient consideration of the interests of the maritime transport sector. Consequently, the
multilateral negotiations broke down because of conflicts between the two gigantic economic entities. The multilateral negotiations on services were not officially resumed until the United States and the European Community had agreed to enter into bilateral negotiations. On the other hand, a procedural mechanism was designed to assist substantial negotiations. For example, the GNS adopted “Procedural Guidelines” for substantial negotiations to solve the substantial disagreements. Consequently, the results of the negotiations successfully covered twelve service sectors and their subsectors, including transport service and its subsector maritime transport. It seems that a future agreement on maritime transport must be rooted in a consensus between the US and European countries.

The additional advance made by the Uruguay Round negotiations to maritime transport was the creation of a model scheduled approach. These modes were drawn up by the European Community in an “Ideal Quad Schedule on International Shipping” which was endorsed by three trade giants, the

PARAMESWARAN, supra note 154, at 211-12, 266-68 (describing developments of the multilateral negotiations as to service from mid-term review in Montreal in Dec. 1988 to the Ministerial-level Trade Negotiations Committee Meeting in Brussels in 1990).

See Uruguay Round Negotiations, Communication from the Chairman of the Group of Negotiations on Services to the Chairman of the Trade Negotiations Committee, MTN.GNS/W/117, (addressing the need of annexes on telecommunications and financial services), at 3.

See GATS, supra note 17, at art. I.2 (prescribing that the four modes of maritime transport services according to the supply of a services).

United States, Canada and Japan.\textsuperscript{264} According to the forms of supply, maritime transport services were divided into four modes: \textsuperscript{265} Mode 1 cross-border supply (e.g. international freights and passengers shipping); \textsuperscript{266} Mode 2 consumption abroad, (e.g. vessel repair); \textsuperscript{267} Mode 3 overseas commercial presence; \textsuperscript{268} and Mode 4 the supply of transport related services through the presence of natural persons.\textsuperscript{269} The classification of modes makes the participants’ offers clearly comparable and saves negotiating time when there are disagreements on the levels of harmonization.

Although the inclusion of maritime transport into the world trading system was agreed upon after the introduction of the dual-level approach, one area where there is a lack of progress is the Uruguay Round. The draft “Annex on Maritime Transport Services” did not pass in order to become binding on Members.\textsuperscript{270} The difficulty in the passing of this maritime Annex was the bilateral disagreement between the United States and the European Community within the multilateral negotiations.\textsuperscript{271} For instance, they disagreed on the scope which service sectors covered and whether special agreements should be presented in the form of annexes to a general agreement on services.\textsuperscript{272}

Maritime transport services were covered by a draft annex, which included air, road and inland waterway transport.\textsuperscript{273}
However, maritime transport became the unique sector that was drafted in an annex but not adopted, due to the lack of the general admitted levels of harmonization in Members’ commitments.\(^\text{274}\) Nevertheless, the United States and the European Community had not given up maritime transport negotiations and agreed to settle their disputes by launching bilateral negotiations on controversial service sectors after the conclusion of the Uruguay Round.\(^\text{275}\) In terms of the coverage of incorporated transport service, the European Community drafted a maritime sectoral/sectional annex applying to all international maritime cargo transport services, including bulk cargo shipping and liner shipping.\(^\text{276}\) Their plan was too comprehensive to gain general support at the beginning stages of negotiations,\(^\text{277}\) and the broad spectrum would possibly encounter more difficulties.\(^\text{278}\) Therefore, the task of harmonization should be started from a small area, such as liner shipping.\(^\text{279}\)

The Final Act Embodying the Results of Uruguay Round of Multilateral Trade Negotiations was officially signed, and the GATS became an indispensable component of the WTO, in Marrakesh on April 15, 1994.\(^\text{280}\) The GATS disciplines generally apply to all service sectors\(^\text{281}\) with various degrees of unification.

---

\(^\text{274}\) WTO, GATS and its annex, supra note 15. As to financial services, a protocol (Second Protocol to the GATS) was adopted on 21 July 1995, and entered into force on 1 September 1996. Subsequently another protocol (Fifth Protocol to the GATS) as to financial services was adopted on 14 November 1997, and entered into force on 1 March 1999. Others protocols concerning the movement of nature persons (Third Protocol to the GATS) and as to telecommunications (Fourth Protocol to the GATS) have also been adopted and entered into force.

tion from sector to sector.\textsuperscript{282} The inclusion of maritime transport services into the GATS is officially confirmed in the form of a GATS Annex entitled “Negotiations on Maritime Transport Services”\textsuperscript{283} Therefore, further negotiations of harmonization may be situated under the Annex.

\textbf{B. Progress in the NGMTS Negotiations (1994-1997): Bilateral or Multilateral?}

The maritime transport negotiations occurred in the era of specific sectoral/sectional negotiations after the Uruguay Round Negotiations.\textsuperscript{284} According to \textit{Ministerial Decision on Negotiations on Maritime Transport Services}\textsuperscript{285} and GATS “Annex on Negotiation on Maritime Transport,”\textsuperscript{286} the WTO provided the mandate for specific sectoral/sectional negotiations on maritime transport to be commenced no later than May 16, 1994 and closed by June 1996.\textsuperscript{287}

The first advancement was that the design of dual-level negotiations which was maintained as a specific sectoral discussion forum under the “Negotiating Group on Maritime Transport Services” (NGMTS).\textsuperscript{288} This group was established for the exclusive handling of the maritime transport regime.\textsuperscript{289} Thus, the sectoral/sectional negotiations reduced the trade-off that successive rounds of multilateral negotiations in the GATT tradition as foreseen in the GATS will broaden and deepen in maritime transport services).

\textsuperscript{282} The application to a specific service sector was highly influenced by the related negotiations and the concrete commitments. For example, the area of maritime transport services was suspended after the Uruguay Negotiations until 1994. See WTO, Services: Post-Negotiations - Post-Uruguay Round Negotiation (1994-97), http://www.wto.org/english/tratop_e/serv_e/s_negs_posturuguay_e.htm, accessed 3 July 2012.

risks between service sectors and reduced the opposition from the shipping industry.

During the post-Uruguay Round Negotiations, the second advancement was that the NGMTS had integrated the UN agencies and elaborately worked together in depth for the first time. By the end of 1996, there were fifty-six members, as well as sixteen observers, in the NGMTS negotiations. These participants substantially engaged in the NGMTS negotiations through sixteen formal meetings at Marrakesh. However, only international organizations obtained the right of observership. Some of the international organizations included were the OECD, UNCTAD and World Bank.

The third advancement is the method by which the NGMTS exclusively based substantial negotiations on primary data. The NGMTS had its Secretariat prepare a questionnaire to collect primary information in 1994. The finalized ques-

296 Negotiating Group on Maritime Transport Services, Questionnaire on Maritime Transport Services S/NGMTS/W/2, (Oct.21, 1994), at 2-10 (publish-
The questionnaire was very comprehensive, consisting of two parts. Part I of the questionnaire covered economic structure and statistics on international shipping markets. Part II of the questionnaire dealt with the regulatory structures applicable for maritime transport in each Member. Almost all NGMTS members and observers responded to the schemes of the questionnaire and stating that the questionnaire serves the purpose of establishing factual background but not extends to issues such as competition law and shipping conferences, as well on the institutional arrangements.

Negotiating Group on Maritime Transport Services, Note on the Meeting of 13 July 1994, S/NGMTS/2 (Aug. 4, 1994) ¶11 (mentioning that the questionnaire would be produced by the Secretariat on the economic structure, including trade flows and on regulatory structures); S/NGMTS/W/2, (Oct. 21, 1994), at 1 (stating that the questionnaire has been prepared for circulation to all participants and observers of the NGMTS on Jul. 13, 1994).

See Questionnaire on Maritime Transport Services, supra note 296 at 2 (stating in Introductory Comments, that the questions were designed to capture, as fully as possible, the information on participants’ market and regulatory structures applying to the maritime transport services sector, including both cargo and passenger transportation where relevant); WTO, Note of the Meeting of 17 October 1994, S/NGMTS/3, (Oct. 31, 1994), at 2, ¶ 6 (restating the purpose of the questionnaire is to establish factual background and did not imply a broadening of the scope of the negotiations).

it, so that the information collected became comprehensive and worked as the factual background for the further negotiations.

Additionally, progress has been achieved in two other areas as well. First, a majority of participants recognized the need to increase transparency on various domestic shipping regulations and the value of legal certainty. Furthermore, the importance of multimodal transport turned out to be further highlighted at the WTO. For example, the United States delegation stressed the inclusion of the door-to-door supply of transport services within GATS framework in its informal statement on multimodal transport.

However, it is necessary to address the area of multimodal transport after the achievement in sea transport. As to inland transport by truck, members impose various domestic instruments, which make the harmonization of multimodal transport very difficult. Subsequently, the joint negotiations on all transport modes would make the sea transport negotiations more difficult. Owing to the absence of joint negotiations on air,

sea and inland transport in the Uruguay Round and NGMTS, international multimodal transport arrangements should not be negotiated before addressing harmonization of sea and inland legs, as well as certain degrees of cabotage on inland waterways, respectively.

Even so, negotiations encountered a tug of war, which saliently happened between the United States and other participants. Also, a majority of participants had not rendered substantive offers for maritime transport. In particular, the US delegation failed to submit a timely and substantial offer. As a result, most other participants swiftly shifted backwards to their Uruguay-Round propositions. A number of negotiating representatives claimed that there was a need for a substantial offer from the world’s major trading entities first. Subsequently, their feedback was far from the United States’ expectation on substantial rules on maritime transport under the GATS. It seemed as though many participants were waiting for the United States to submit their substantial offer first, but the U.S. was waiting for everyone else. Therefore, this historical period demonstrated the difficulty of addressing the tug of war in the multilateral negotiations.

So far, accomplishing a multilateral agreement on maritime transport under GATS is still far from being attained. The lack of a substantial US offer on maritime transport ser-

vices has tremendous negative effects in other countries, particularly in developing countries, on the inclusion of this sector into the world trading system.\textsuperscript{317} On the one hand, the European Community proposed to promote a mere standstill agreement, taking the view that “the challenge in maritime [transport service] was not so much to liberalize as to bind the existing openness of most trade regimes.”\textsuperscript{318} In contrast, the United States ardently appealed for an agreement, which in fact liberalized the shipping sector.\textsuperscript{319} The United States claimed that an agreement standstill was not sufficient,\textsuperscript{320} and emphasized that a sea-transport agreement should be promoting the level of liberalization rather than merely reflecting the current level.\textsuperscript{321} This was in spite of a last-minute unification effort by twenty-four participants\textsuperscript{322} that proposed a package of draft offers “conditional on a matching, comprehensive offer from the United States” in June 1996.\textsuperscript{323} The package constituted several substantial improvements on all three pillars of maritime transport services, as well as on multimodal transport.\textsuperscript{324} Nevertheless, the United States ultimately deemed it as merely reinforcing the \textit{status quo} and repackaging the previous offers that were far from being sufficient.\textsuperscript{325} When

\textsuperscript{324} Id.
\textsuperscript{325} Negotiating Group on Maritime Transport Services, \textit{Note on the Meeting of 13 and 16 February}, S/NGMTS/9 (Mar. 8, 1996), at 1, ¶ 5 (stating that the US would not put forward either an offer or a request because it did not consider the existing offers satisfactory); See also WTO, \textit{Note on the Meeting}
the NGMTS was ended mandatorily, the improved offer submitted by twenty-four countries was rejected because of the US’s resistance. Consequently, it was widely recognized that the NGMTS negotiations should not be continued at that moment, and the NGMTS negotiations between 1994 and 1996 fell into a stalemate at the end of June 1996. In order to address the tug of war in future negotiations, bilateral negotiations and multilateral negotiations might be undertaken.

History usually repeats itself. When the Uruguay Round was nearing its end, some participating members tried to make a last-minute effort to achieve maritime transport liberalization by offering varying degrees of liberalized offers, but these
meaningful offers were withdrawn before the mandatory close of negotiations, due to the absence of a US offer.\textsuperscript{330} Other significant maritime powers either entirely withdrew (e.g. the European countries)\textsuperscript{331} or significantly diminished substantive offers (e.g. Canada,\textsuperscript{332} Japan\textsuperscript{333} and India\textsuperscript{334}). Again, the absence of a US substantial offer led the NGMTS negotiations between 1994 and 1996 to a deadlock. Although the US delegation claimed that the US regime for maritime transport services was almost the most liberal in the world, many NGMTS participants felt that there were some ulterior motives associated with the US reluctance to make a substantive concession on its domestic restrictive measures, for instance US unilateral cargo reservation for its domestic carriers and a conservative policy for its cabotage trade.\textsuperscript{335} As Parameswaran noted, the NGMTS seemed to encounter a tug-of-war between the United States and other participating negotiators:\textsuperscript{336} the United States was waiting for other negotiators to submit a set of comprehensive and adequate offers; nonetheless a considerable number of participating countries would not actively and voluntarily do so unless the US handed in a substantial offer as a premise.\textsuperscript{337}

At first glance at the failures in negotiations, the history of NGMTS negotiations has established that it is difficult to

\textsuperscript{330} See, e.g., Negotiating Group on Maritime Transport Services, \textit{Communication from the European Community and their Member States}, S/NGMTS/W/5 (Jul. 17, 1995), ¶ 3 (protesting the US unilateral measures affecting the multilateral negotiations on the liberalization of maritime transport); Parameswaran, supra note 154, at 300.

\textsuperscript{337} Id. at 299.
achieve a worldwide enforceable maritime transport regime without a meaningful participation from the United States. The previous negotiation practices teach us that a successful conclusion of an extended negotiation of Uruguay Round negotiation on the GATS is not achievable without the participation of the US. As further maritime transport negotiations developed, it became obvious that a substantial involvement of the United States was the precondition for the breakdown of the paralyzed maritime negotiations.

Further scrutiny of the United States’ practice shows a bilateral approach may break the deadlock in multilateral negotiations. First of all, the absence of a US substantial offer is because there are two conflicting voices as to shipping within this country. It is the United States government who pioneered the inclusion of services sectors into WTO, meanwhile its domestic shipping industry tried to exclude shipping from being included. The shipping industry’s resistance originated from the shipowners who feared that their interests granted by national instruments would vanish after maritime transport services were integrated at the world trading system. Moreover, conflicts within influential parties had not been properly addressed before the multilateral negotiations at the WTO level. For instance, the confrontation between the United States and the Europe was once very tough. The success of the US-EC bilateral agreement proves that the tough issues can be addressed by moving from a bilateral approach to extended multilateral negotiations.

lateral negotiations.\textsuperscript{342} Further, in recent maritime negotiations, bilateral agreements are highly helpful between important trade regions, such as those concluded between the European Union and China,\textsuperscript{343} and the United States and China.\textsuperscript{344} Therefore, bilateral negotiations will help the multilateral trading negotiations remove difficulties.

On January 1, 2000, GATS negotiations were officially launched as scheduled.\textsuperscript{345} This new trade round was initiated at a Declaration during the Fourth WTO Ministerial Conference in Doha, Qatar in November 2001 (Doha Round).\textsuperscript{346} Currently, maritime transport services are included in this Round under GATS negotiations along with all other service sectors.\textsuperscript{347}

In an early phase of the Doha Round, the developed and the developing countries expressed their common interest in maritime transport services.\textsuperscript{348} In October 2000, the European Community prompted a joint statement specifically dealing

with maritime transport. Later, Japan, Norway, the Republic of Korea, Chile, Australia and Colombia submitted respective negotiation proposals as well. As we have seen, the Doha Round inherits a request-offer approach from previous negotiations. In light of the previous offers, they aimed to reduce, or even to further eliminate, impediments to the shipping industry and to cultivate a free and fair competitive shipping market with merely a minimum level of regulation on reducing shipping tariffs thus benefiting consumers from all WTO member parties.

The principles of trade in services are contained in the GATS, including maritime transport service sectors. The specific regime for maritime transport services in the negotiations is defined by decision. The “Guidelines and Procedures for the Negotiations on Trade in Services” at paragraph 11 claims that “Liberalization shall be advanced through bilateral, plurilateral or multilateral negotiations […]”. After the Hong Kong 2005 Ministerial Conference, the rigidness of harmonization on maritime transport services is amended with certain flexibilities with regard to countries at different stage of develop-

A substantial advance in the Doha Round negotiations is that absence of a US offer on the maritime transport sector has not frozen the multilateral negotiations. Until 2003, the United States had not included any specific commitment on maritime transport service because the inclusion of the maritime transport into GATS/WTO negotiations under the Doha Round would reduce US flexibility on whether to undertake counteract. The inclusion means that the breach of WTO maritime transport will be a subject under the dispute settlement apparatus, instead of by any unilateral retaliatory measure, in addition that the US would be subject to the WTO dispute settlement system concerning maritime transport issues. Moreover, the US’s hesitation caused negative reactions from other countries, particularly developing countries, such as India and Brazil towards handing in any comprehensive and substantial offers in the sector. Even so, developing countries have learnt not to rely heavily on the US attitude. There are an increasing number of developing countries that have made substantial commitments on maritime transport, including India and Brazil. As a result, the Doha Round has been developed without heavy reliance on the US offers like the NGMTS negotiations (1994-1996).

Unlike the NGMTS specific forum, the Doha Round is problematic owing to lack of a specialized maritime transport negotiation platform. Although the Korean delegation hinted

that it was necessary to found the NGMTS-like negotiation forum, a specialized negotiation forum on merely maritime transport has not been established.\footnote{Special Session of the Council for Trade in Services, Korea Delegation’s Proposal, S/CSS/W/87, (May 11, 2001), at ¶5.} The General Council of Services decided to undertake maritime transport negotiations along with all other services sectors.\footnote{Id.} Firstly, it is unlikely for negotiators to be equipped with adequate knowledge in this sector due to the perplexing nature of sea transport.

Moreover, the mixed negotiations mean the sea transport sector encounters trade-off risks from other sectors. The cross sectoral/sectional trade-off bargaining practices existed in the previous WTO negotiations. This practice was widely manipulated by negotiators in their bargaining procedure in the transformation from the GATT system to the WTO system.\footnote{See Jackson, supra note 40, at 48.} From the perspective of a governmental negotiator, the overall service trade of the country gained an upper hand over domestic shipping industry only.\footnote{PARAMESWARAN, supra note 154, at 252-53, 346-48.} Due to the lesser economic and political importance of the shipping industry compared with a country’s overall services economy, the maritime transport sector faced a challenge from the trade-off process.\footnote{Id.} Despite the acknowledgement of the essential importance achieved through GATT as to trade of goods, shipowners’ associations in different countries might fear that the inclusion of maritime services negotiations in this framework is paralleled with all other sectoral/sectional services bears the risk of cross-sectoral/sectional trade-off problem.\footnote{See CENSA, GATT Rules for Sea Transport: CENSA Position Paper (May 1984), at 2; BIAC, BIAC Statement to the OECD Maritime Transport Committee Regarding Maritime Services and the GATT (Jun.23, 1989); International Chamber of Commerce, Liberalization of Services Under the GATT Uruguay Round, 321/360 (1989), at 2; OECD DAFFE/MTC/87.11(2nd Rev.) (October 1987), at 7; OECD, Results of the Uruguay Round of Multilateral Trade Negotiations on Maritime Transport, DSTI/SI/MTC(94)9, (Mar.1994), at 2.} The problem will remain outstanding unless the maritime transport is negotiated separately as a specific service sector; the agreements achieved in the independent negotiations will form a GATS annex.

Additionally, a request-offer approach used in the Doha
Round bears a risk of creating a negotiation vacuum in WTO Member’s offers. During 2003, WTO Members submitted a number of initial offers on all service sectors. Among them, some offers contained meaningfully substantial commitments on all three pillars of maritime transport, multimodal transport (referred to sometimes as the fourth pillar), and even on certain extents of cabotage domestic transport. Take the European Community offer as an example. The European Community mainly restates its 1996 NGMTS-negotiation offer with a high extent of liberalization on international shipping and on cabotage shipping as well. So do the offers of New Zealand, Australia, Canada, Japan, all of whom are maritime powers. Nevertheless, others omitted the shipping sector in their service GATS commitments entirely. A salient example was the US offer, which did not include any specific commitment to the shipping sector.

Last but not least, it is necessary to unify the system of classification before the next negotiations. The participants follow various classifications of maritime transport subcategories, so that it is very difficult to precisely identify common and conflicting areas for further negotiations. So far, the diversity of national commitments combine three commonly used forms of classification systems, mixing the Central Product Classification (CPC) system and services sectoral-sectional

---

370 Id.
371 Id.
Classification List, as well as the Maritime Model Schedule (MMS). The diversity is further perplexed by the fact that some Members added their own sui generis definitions.

As of November 2005, WTO members collectively identified their sectoral/sectional and modal objectives for maritime transport negotiations. Unfortunately, many of the details of maritime negotiations contained in maritime transport negotiations remain restricted and unavailable for researchers.

The key objective of this new round of maritime negotiations probably puts greater emphasis on developing countries, which is reflected in many articles in the 2001 Doha Ministerial Declaration. Active participation of China in the WTO negotiations and in the Rotterdam Rules’ negotiations offer various chances for maritime transport service providers from all over the world to embody the Chinese maritime regime in a uniform regime under the WTO, in particular the GATS, framework.

It is worth noting that, within the WTO framework, a multilateral trading and negotiating system, there are a few non-reciprocal elements, albeit they usually erode the unification of an international transport regime. These exceptions originate from the progressive notion. According to some, these exceptions benefit less developed countries from a fully uniform GATS transport regime offered by developed member parities without requiring that the former groups adhere to the uniform standards at exactly the same degree as that of the latter groups. In fact, it is reasonable to allow this non-reciprocity, because these LDCs are usually negotiating underdogs. Owing to their minor economic importance and unfamiliarity with the WTO rules of play, they cannot act as rule makers.

382 GATS, supra note 17, at Part IV “Progressive Liberalization”
This merit distinguishes the WTO from other international organizations, contributing to the active engagement of the developing world. Thus, while it is important to strive for substantial unification in all major maritime powers from both the industrialized and developing world, the absence of GATS offers on all three pillars of sea transport sectors and multimodal transport from some will not inevitably result in the overall failure of GATS maritime negotiations. If the unification is achieved through a progressive process, the developing countries can tender substantial offers, which meet high standards but will be realized through progressive phrases. On balance, the aim of the developed world, for instance the U.S., cannot be achieved without considerations on the reluctance of the developing world.

D. Reopening of Maritime Transport Negotiations under the WTO Framework

Based on the historical and doctrinal analyses of maritime transport negotiations within the WTO framework, the thesis argues that it is feasible to reopen the maritime transport related negotiations within the WTO framework now. The legal setting today is different from it was, and the WTO has been much developed since 1995. In particular, the TRIPS model of unifying intellectual property rights has become full-fledged after approximately 20 years’ development. The TRIPS model has proved that the WTO is able to unify a fragmented area of law, and this will reduce the concerns of negotiators against opening of maritime transport negotiations. In addition, the nature of unifying intellectual property right regimes and unifying seaborne cargo regimes are almost the same. Thus, the success of the WTO in the TRIPS model provides the international community a feasible way to unify seaborne cargo rules. Moreover, the interest parties have recognized the increasing importance of maritime transport negotiations, such as in the US and other developing countries. Chapter Seven will ad-

dress how to remove possible barriers to negotiations and the implementation of uniform maritime transport rules.

V. CONCLUSION

Traditionally, sea transport law is governed by conventions. Its harmonization has been negotiated under the UN framework; most notably in the Hamburg Rules and recently in the Rotterdam Rules since the 1970s. Unfortunately, these two UN conventions have had difficulties in achieving worldwide ratification in so far as to form a uniform sea transport regime. Owing to the successful incorporation of another private-right area of intellectual property into its framework, the WTO is likely to cooperate with the UN to foster a uniform sea transport regime and to address the issues on unification and liberalization in one go under the WTO’s GATS annex. Furthermore, the WTO is an influential worldwide organization built upon comprehensive documents and complete legal framework.

The unification of seaborne transport is feasible under the GATS, since the WTO has successfully created a uniform IP regime under TRIPS. On the whole, the WTO possesses at least five advantages in boosting the pace of unification of the sea transport regime. First, it has the successful precedent of cooperation with the UN’s WIPO in IP regime which can be followed in the sea transport regime. Second, the WTO’s unique way under TRIPS of dealing with the WTO agreements and pre-existing international treaties on IP will shed light on the potential reference to previous sea cargo conventions, including the UN Hamburg and Rotterdam Rules to the GATS and its annex. Third, the WTO has developed a theory of balancing rights for the conflicting interest groups from TRIPS and will apply it to the maritime transport uniform law negotiations. Fourth, the WTO can establish minimum standards under its GATS to maintain the criteria of unification for sea transport as does TRIPS. Fifth, the WTO institution is effectively implemented under an enforcement procedure under a dispute settlement system. Based on these five merits, the endeavours to unify sea transport law will be increasingly accelerated with WTO and UN cooperation.

The relationship between the WTO and maritime transport regime can be traced backwards to GATS negotiate-
tions which contained maritime transport negotiations. In light of the history of the GATS-based maritime transport negotiations from the 1980s to today, there has been demonstrated a trend subject to both progression and regression. Since the Uruguay Round, maritime transport services have been integrated into the WTO negotiations for the first time. The necessity of its inclusion had been challenged and confirmed in the NGMTS negotiations from 1994 to 1996. The progress achieved during this period includes the formation of the specific negotiation forum and a statistical approach based on a wide range of questionnaires. Also, it explores a pre-bilateral approach combined with multilateral negotiations to address the problem of absence of substantial offers from importance entities, such as the US. In order to continue the NGMTS achievements, a significant drawback in the current Doha Round, namely the lack of a special negotiation platform for maritime transport services, should be removed. This is because seaborne transport bears trade-off risks, which require an independent negotiations forum and a special annex.

On the whole, the maritime negotiations within the world trading system are divided into three stages in Section V: the Uruguay Round (1986-1994), the NGMTS (1994-1997) and Doha Round (2000- ). From the progress and regress within the three-stage negotiations, there are primarily three lessons learned which shed lights to future uniformity of maritime transport regimes. The first lesson is that the dual approach introduced within the Uruguay Round, has the beneficiary effects of expanding the participation of maritime negotiations, and of shrinking the trade-off problem. This dual approach was continued in the NGMTS negotiations; however, the Doha Round negotiations have not maintained it. Future maritime negotiations should maintain this dual approach in designing negotiating forums and concluding the negotiating results in an independent instrument (e.g. an annex) exclusively for maritime transport sector.

The second lesson regards the ways to engage a number of private participants in the shipping industry. In light of the NGMTS negotiations, in order to foster communications between the shipping industry and rule makers, future negotiations should consult non-government entities (e.g. shipowners’ council and shippers’ alliances). In future negotiations, the
form of their participation is not restricted to the role of observers. For instance, the WTO can hold workshops similar to those the OECD currently holds and allow respective private parties to hear and speak out there.\textsuperscript{388}

The third lesson is on the merits of conducting empirical research on maritime transport.\textsuperscript{389} The questionnaire conducted by the NGMTS on the maritime transport is a worthwhile endeavor due to the general lack of worldwide statistical data\textsuperscript{390} concerning the seaborne transport service sector today. Even though the questionnaire was conducted in 1994,\textsuperscript{391} and some information is obsolete,\textsuperscript{392} a number of results are still worthy of attention in today’s harmonized system.\textsuperscript{393} Cabotage is generally excluded from sea transport negotiations.\textsuperscript{394} That indicates that negotiators are very conservative on transportation within their Member’s territories. Similarly, the multimodal transport might be a tough issue because of its inland transport legs. Thus, further GATS negotiations may discuss cabotage and multimodal transport issues but cannot harmonize them at the beginning stages of maritime negotiations. Moreover, the unification of sea cargo regulation under the GATS already had been initiated by a WTO member’s response concerning the minimum standardization of transport service and conditions of carriage.\textsuperscript{395} Accordingly, it is also worthwhile

\textsuperscript{388} E.g. OECD, Workshop: Measuring the potential of green growth in Chile (Santiago, Chile), http://www.oecd.org/chile/lowcarbonworkshopchile.htm, accessed Feb. 25, 2013 (the OECD engages individuals, intergovernmental and non-government organizations in its workshops).

\textsuperscript{393} Questionnaire on Maritime Transport Services, supra note 296, at 1.

\textsuperscript{394} See WTO, supra note 301; e.g. WTO, Communication from Cyprus-Response to Questionnaire on Maritime Transport Services, S/NGMTS/W/2/Add.8, (Feb.6, 1995), at 3.

\textsuperscript{395} Negotiating Group on Maritime Transport Services, Communication from Australia-Response to Questionnaire on Maritime Transport Services, S/NGMTS/W/2/Add.4, (Jan. 24, 1995), at 8 and 12-13; Negotiating Group on
of conducting a similar questionnaire in the further to obtain more first-hand information.\footnote{Background Note By Secretariat, supra note 390. The problem of the statistical data vacuum on shipping has been recognized since the Uruguay Round.}

The last lesson is the introduction of the supplementary mechanisms, designed in the Uruguay Round and NGMTS negotiations, may avoid tugs of war in negotiations. The two supplementary mechanisms, used in the NGMTS and Doha Round negotiations, for multilateral negotiations are helpful to solve disagreements, namely procedural rules of negotiations and bilateral negotiations. In order to avoid the deadlock of tugs of war in the next negotiations, it might be necessary to impose deadlines for all participants to submit offers.

Therefore, having been an important part of the negotiating agenda in the Uruguay Round, the NGMTS, and the Doha Round, maritime transport may be concluded within an annex to the GATS with reference to selected pre-existing conventions. Besides unification, the WTO will also need to tackle some shipping-related issues, because they are all components of the GATS-based annex on maritime transport.
