"The discipline of public health is critical... because of its values of social justice and fairness for all, and its focus on the collective actions of interdependent and empowered peoples and their communities."²

INTRODUCTION

While the United States places great importance on individual freedoms,³ the Preamble to the United States Constitution explicitly recognizes the importance of community. It refers to the "general welfare" of "the people," suggesting that the Constitution's ultimate objective is to serve our shared well-being.⁴ Likewise, states' police power to protect public health, safety, and welfare focuses on the well-being of the whole.⁵ Nonetheless, United States' law, policy, and culture often emphasize individual rights and freedoms over our mutual good. For example, freedom of speech, freedom of religion, freedom of association, freedom from unreasonable searches and seizures, and the rights to liberty, equal protection and due process are among the rights upon which we place great value.⁶

Public health law stands out in this space of individualism; consistent with the Preamble to the Constitution, it focuses on the collective. The raison d'être of public health law is to protect community health.⁷ It recognizes and addresses humanity's interdependence, both nationally and globally.⁸ Public health experts, for example, understand that failure to contain contagious diseases potentially threatens everyone.⁹ Recent outbreaks of the Ebola and Zika viruses, which impacted several countries on more than one continent, exemplify this reality.¹⁰ No public health threat

³ See, e.g., U.S. CONST. amends. I–X.
⁴ See U.S. CONST. pmbl.; see also infra note 18.
⁶ The Constitution has also been interpreted to encompass a right to privacy and to substantive due process. See, e.g., Roe v. Wade, 410 U.S. 113, 152, 164 (1973); Griswold v. Connecticut, 381 U.S. 479, 485 (1965). The United States Supreme Court has also ruled there is an individual right to bear arms found in the Second Amendment, which was interpreted to include an individual right to bear arms unconnected to state militias. District of Columbia v. Heller, 554 U.S. 570, 595–96 (2008). These individual rights are not without controversy, especially the right to bear arms and abortion rights. There are a whole host of opinions, for example, about the scope of the right to bear arms. The right to abortion also remains controversial.

⁹ Required school vaccination rules recognize the need for "herd immunity," a level of immunization that keeps disease at bay. Pam Belluck & Adeel Hassan, Measles Outbreak Questions and Answers: Everything You Want to Know, N.Y. TIMES (Feb. 20, 2019), https://www.nytimes.com/2019/02/20/us/measles-outbreak.html [https://perma.cc/48J5-U6FV]. The level of immunization needed for herd immunity varies by disease. Id. Measles, for example, typically requires an immunization level of 93–95% for herd immunity. Id.

¹⁰ Although our public health laws apply only to the United States, it is clear in this global world that any serious public health threat is a potential threat everywhere. The 2014 Ebola outbreak highlighted the global risk when the disease came to our shores. See Alison Bruzek, Ebola in the United States: What Happened When, NAT'L PUBLIC RADIO (Oct. 15, 2014, 12:51 PM), https://www.npr.org/sections/health-shots/2014/10/15/356098903/ebola-in-the-united-states-what-happened-when [https://perma.cc/YS9A-ER92]. Organizations like the CDC and the WHO work together across
in modern memory, however, parallels the coronavirus that causes Covid-19. First detected in Wuhan, China in December 2019, within a matter of three months, this novel coronavirus pandemic impacted almost every country in the world.\textsuperscript{11} By March 2020, the World Health Organization reported 509,164 confirmed cases in nearly 200 countries, with 23,335 deaths.\textsuperscript{12} In the United States alone, the Centers for Disease Control & Prevention reported 85,356 cases of Covid-19 and 1,246 deaths.\textsuperscript{13}

Public health law sets forth government’s responsibility to protect community well-being at every level.\textsuperscript{14} It includes a number of tools for protecting the health and welfare of the community. For example, mandatory vaccinations for school

attendance, rules for disease surveillance, and the keeping of vital records are just a few examples of governmental efforts to promote public health. Public health law’s focus on the health and well-being of the community, indeed of humanity itself, also protects the individuals who comprise the community. Public health law’s goals thus reflect the constitutional values of promoting the “general welfare” for “the people,” even when it falls short of meeting those goals.

Its recognition of our shared well-being makes public health law a model for other legal arenas. It is an inclusive approach to the law that seeks solutions for our mutual benefit. This article therefore argues that public health law can be used as a prism through which to view the law more generally. Specifically, it compares public health law to laws that address financial well-being. When it comes to financial well-being, the law generally focuses on the individual. It often fails to address the general welfare. Instead, it tends to include policies that explicitly pick winners and losers. Corporate law, for example, generally does not reflect our financial

17 Disease surveillance and the keeping of vital records supply us with critical data with which to make public health decisions. MICHAEL J. SIRI & DANIEL L. CORK, NAT’L RESEARCH COUNCIL, VITAL STATISTICS: SUMMARY OF A WORKSHOP 80–81 (2009).
18 The language of the Preamble is replete with references to the general populace:

WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this CONSTITUTION for the United States of America.

U.S. CONST. pmbl. For example, “We the people,” “a more perfect Union,” and “promote the general welfare” are all references to the population at large. President Lincoln’s famous Gettysburg Address likewise recognized the collective: “[G]overnment of the people, by the people, for the people, shall not perish from the earth.” President Abraham Lincoln, Gettysburg Address (Nov. 19, 1863) (emphasis added). For a more recent example of general welfare-oriented policies, see Thomas L. Friedman, Where American Politics Can Still Work: From the Bottom Up, N.Y. TIMES (July 3, 2018), https://www.nytimes.com/2018/07/03/opinion/community-revitalization-lancaster.html [https://perma.cc/G3LQ-9G6F] (discussing communities that check their personal political views at the door and work together for the common good). Friedman quotes Randy Patterson, Lancaster Director of Economic Development and Neighborhood Revitalization:

“There were no community-oriented goals, . . . [s]o the board moved to a collective-impact model—four bold goals over 10 years—aimed at reducing poverty by 50 percent; making sure that every child is kindergarten-ready in terms of basic learning skills; ensuring that every adult has access to postsecondary education and credentials; and ensuring that every citizen has access to some kind of health care.”

20 The recent tax reform, for example, will reportedly benefit the top one percent of the economic ladder far more than those who most need it. Dylan Matthews, The Republican Tax Bill Got Worse: Now the Top 1% Gets 83% of the Gains, VOX (Dec. 18, 2017, 4:01 PM), https://www.vox.com/policy-and-politics/2017/12/18/16791174/republican-tax-bill-congress-conference-tax-policy-center [https://perma.cc/GV86-H145F]. Criminalizing and incarcerating non-violent, low-level drug offenders is another example of these types of policies. See Bryan Stevenson, Drug Policy, Criminal Justice and Mass Imprisonment 3 (Global Comm. on Drug Policies, Working Paper, Jan. 24–25, 2011). Some states and countries, however, have finally begun to view drug use and addiction as a public health problem rather than a criminal problem. See, e.g., Naina Bajekal, Want to Win
interdependence, but instead reflects free market theories and profit maximization regardless of the harm they may impose on substantial segments of society. The government is reluctant to interfere with private commercial agreements even if those agreements harm others.\textsuperscript{21} While we pride ourselves on our individualism and individual rights, extreme individualism without regard for the greater community can be devastating if it prevents a collective response to a collective problem such as a contagious disease or a diseased economy. Just as we are interdependent in matters of public health, we are interdependent financially. Yet the law often fails to reflect this. In order to improve, a new paradigm—a "progressive capitalism" that includes the general welfare in the financial context—must be implemented.\textsuperscript{22}

While the one percent thrives under the status quo, they often seem unconcerned with those left behind. Arguably this is because the privileged few fail to recognize a common cause with the struggling masses, and they further fail to see their well-being as interdependent with the well-being of the 99 percent. For example, corporate law and policy focus on maximizing profitability and shareholder value. While this is important, it arguably minimizes the importance of other members of the corporate community such as workers and customers. Yet all constituencies of the corporate community are interdependent. History has shown that as a society and as an economy, we do best when our laws and policies work toward everyone’s benefit.\textsuperscript{23} An inclusive focus on the entire “beloved community”\textsuperscript{24} protects it at both the macro and micro levels.

\textsuperscript{21} See Joseph E. Stiglitz, Of the 1%, by the 1%, for the 1%, VANITY FAIR (Mar. 31, 2011), https://www.vanityfair.com/news/2011/05/top-one-percent-201105 [https://perma.cc/59B9-8SJ6]. Reluctance to interfere with the freedom to contract unless, for example, it is unconscionable, entered into under duress, or other extreme circumstances is an example of this. Simple unfairness is not enough. See, e.g., Williams v. Walker-Thomas Furniture Co., 350 F.2d 445, 449 (D.C. Cir. 1965) (noting that the presence of unconscionability at time of the creation of a contract rendered the contract unenforceable); U.C.C. § 2-302 (AM. LAW INST. & UNIF. LAW COMM’N 2002); see also infra text accompanying note 116.

\textsuperscript{24} The term “beloved community” was first coined by Josiah Royce, founder of the Fellowship of Reconciliation, and Reverend Dr. Martin Luther King, Jr. subsequently embraced the term. The King Philosophy, KING CTR., http://www.thekingcenter.org/king-philosophy [https://perma.cc/XVB9-7KZE]. The King Center explains:

Dr. King’s Beloved Community is a global vision, in which all people can share in the wealth of the earth. In the Beloved Community, poverty, hunger and homelessness will not be tolerated because international standards of human decency will not allow it. Racism and all forms of discrimination, bigotry and prejudice will be replaced by an all-inclusive spirit of sisterhood and brotherhood. In the Beloved Community, international disputes will be resolved by peaceful conflict-resolution and reconciliation of adversaries, instead of military power. Love
This Article examines how we can overlay the principle of serving the common good, which undergirds public health law, onto financial well-being. It suggests that we apply public health law principles to corporate law and culture. In matters of public health, we view quite broadly states’ police power to protect the public good. Government is also empowered to protect the general welfare in matters of financial well-being. Using the “general welfare” as a guidepost, this Article challenges the conventional wisdom that corporations exist solely to maximize profit and shareholder value to the exclusion of virtually everything else. It proposes two areas of change for improving our collective financial well-being. First, it suggests new rules for corporate board composition and accountability, specifically, proposing the elimination of the business judgment rule for executive compensation decisions. Second, it proposes that employees of large corporations elect 40% of the board members. Finally, this Article also highlights the link between financial well-being and democracy and urges that voting rights and campaign finance laws be strengthened. Part I of this Article explores the community-focused mission of public health law. Part II examines the more individualistic nature of corporate law and culture. Part III suggests policy changes that would apply community-focused public health law concepts to the economy, making for a more equitable society.

I. PUBLIC HEALTH LAW: “WE’RE IN THE SAME BOAT NOW”

Public health law can be a model for evaluating other areas of the law. Public health law, like public health professionals, has as its fundamental purpose the protection of population health. In contrast to individual health care practitioners who work one-on-one with each patient, public health experts are focused on the
collective rather than the individual. Supporting that focus, public health law emphasizes the health of the community. It explores the responsibilities of, as well as the limitations on, governmental power to protect the public’s health and provides the foundation for a public health infrastructure to protect community health. A functional public health infrastructure requires a wide breadth of dedicated governmental agencies, from the Centers for Disease Control (CDC) to the National Institutes of Health (NIH), to the World Health Organization (WHO), to state and local departments of health, among others. In essence, public health infrastructure is the result of laws and advocacy that recognize the need to protect the common good.

Matters of health generally come within the purview of state police power. In the seminal public health law case, *Jacobson v. Massachusetts*, the United States Supreme Court upheld a Cambridge, Massachusetts ordinance, promulgated under authority of state law, that imposed a mandatory smallpox vaccination on its inhabitants. Noting that the City of Cambridge had found that smallpox posed a significant threat to the community, the Court upheld the ordinance. It understood that there are times when individual rights must give way to the greater good, and it explicitly recognized the breadth of the state’s police power to protect public health, safety, and welfare:

Although this court has refrained from any attempt to define the limits of [state police] power, yet it has distinctly recognized the authority of a State to enact . . . “health laws of every description[.]” . . . According to settled principles the police power of a State must be held to embrace, at least,

29 While there is no bright line between public health law and other health laws like the Affordable Care Act, public health initiatives have been credited with the bulk of the increase in life expectancy during the 20th century. *Ten Great Public Health Achievements—United States, 1900–1999*, 48 CDC MORTALITY & MORBIDITY WKL. REP. 241, 241 (1999), https://www.cdc.gov/mmwr/preview/mmwrhtml/00056796.htm [https://perma.cc/C52G-E3ET] (noting that 25 of the more than 30-year increase in life expectancy were due to public health advances).

30 GOSTIN, supra note 5, at 33; cf. Micah L. Berman, *Defining the Field of Public Health Law*, 15 DEPAUL J. HEALTH CARE L. 45, 47 (2013) (“[Public health concerns are often absent from legal debates, and even when they are raised, they are often discarded as improper ‘policy’ (as opposed to legal) considerations.”).

31 Although they are not truly separate, individualized medicine generally refers to individual diagnoses and recommended treatments between individual patients and their physicians. See Onyebuchi A. Arah, *On the Relationship Between Individual and Population Health*, 12 MED. HEALTH CARE & PHIL. 235, 235–36 (2009). Arah notes:

The relationship between individual and population health is partially built on the broad dichotomization of medicine into clinical medicine and public health. Potential drawbacks of current views include seeing both individual and population health as absolute and independent concepts. . . . [T]he relationship between individual and population health[, however,] is largely relative and dynamic.

33 *Jacobson v. Massachusetts*, 197 U.S. 11, 26–28, 38–39 (1905) (upholding a law stating that refusal to comply with vaccination requirement would result in a five-dollar fine).

34 See id. at 27–28.
such reasonable regulations established directly by legislative enactment as will protect the public health and the public safety. It is equally true that the State may invest local bodies . . . with authority . . . to safeguard the public health and . . . safety.  

The Court concluded that the mandated vaccination fell under the state’s police power umbrella and was thus an appropriate governmental mandate.  

States and municipalities retain extensive police power to protect the public health, safety, and welfare. Every state and many municipalities have Departments of Health and/or Departments of Public Health. They determine, for example, legal smoking and drinking ages, although the federal government also weighs in by withholding funding if states reduce the legal age below federally recommended guidelines. Various levels of government impose taxes on products, like cigarettes, that they deem unhealthy, in an effort to deter their use.

Like the Cambridge ordinance in *Jacobson*, states often delegate some police powers to municipalities. This is due, in part, to the fact that municipal officials are closer to their communities and are better positioned to recognize public health problems.

36 Id. at 29–25. Public health laws generally impose some limitation on individual freedom. Id. at 29. Required school vaccination programs, for example, limit a child’s freedom to attend school without the required vaccine. *Required Vaccines for Child Care and School, CTRS. FOR DISEASE CONTROL & PREVENTION,* [https://www.cdc.gov/vaccines/parents/records/schools.html](https://www.cdc.gov/vaccines/parents/records/schools.html) [https://perma.cc/HWK8-JAXE]. State laws may provide for religious and/or personal exemptions from vaccination requirements. *State Law & Vaccine Requirements, NAT’L VACCINE INFO. CTR.,* [https://www.nvic.org/vaccine-laws/state-vaccine-requirements.aspx](https://www.nvic.org/vaccine-laws/state-vaccine-requirements.aspx) [https://perma.cc/4WGT-DRB8]. Food safety regulations, like those that limit access to raw dairy products, limit food choices. *Compare N.Y. COMP. CODES R. & REGS. tit. 1, § 2.3 (2019) (restricting the sale of raw milk unless seller has obtained a permit), with ARIZ. REV. STAT. ANN. § 3-606 (2019) (permitting the sale of raw milk in retail stores)*. Other public health tools, like quarantine, while rarely used, restrict freedom much more severely. See *Victory: Detained Nurse’s Ebola Suit Secures Due Process, ACLU N.J.* (July 27, 2017), [https://www.aclu-nj.org/news/2017/07/27/victory-detained-nurses-ebola-suit-secures-due-process](https://www.aclu-nj.org/news/2017/07/27/victory-detained-nurses-ebola-suit-secures-due-process) [https://perma.cc/5JUV-AAW2]. For example, in 2014, former New Jersey Governor Chris Christie quarantined Kaci Hickox upon her return to the United States after working in Ebola-plagued communities abroad. Id. She was confined for three days and prevented from travelling to her home in Maine. Id. Because public health law often encompasses some level of restriction, the initiatives may be challenged, as in Hickox’s case. See id.; see also *Jacobson*, 197 U.S. at 25–26 (noting that Jacobson challenged the smallpox vaccination mandate). Many parents also resisted giving their children the HPV vaccine, which can reportedly prevent cervical cancer. Mark Donald White, *Pros, Cons, and Ethics of HPV Vaccine in Teens—Why Such Controversy?*, 3 TRANSLATIONAL ANDROLOGY & UROLOGY 429, 432 (2014), [https://perma.cc/MW6F-6VVU](https://perma.cc/MW6F-6VVU).
39 The federal government, through its spending and taxing power, persuades states to adopt certain public health measures. See *South Dakota v. Dole*, 483 U.S. 203, 205–06 (1987), for an example of how a state forfeits a portion of federal highway funds if it reduces its drinking age below twenty-one.
emergencies at the outset. In addition to addressing outbreaks of contagious diseases, localities engage in a wide range of initiatives designed to improve public health. For example, they keep vital statistics, something that may seem mundane; but, by keeping track of births and deaths, municipalities also track causes of death and other information that can be key to protecting the community. Localities may also do things like increase the number of sidewalks and use zoning laws to facilitate exercise and recreation.

Former New York City Mayor Michael Bloomberg undertook a number of public health initiatives, including the failed effort to limit the size of some sugary beverages.

With globalization and world travel, the federal government and global organizations have also taken leading roles to protect public health. Because diseases are oblivious to local, national, and international borders, they can and do travel with people crossing those borders. At no time has this been more readily apparent than with Covid-19. At the federal level, the Department of Health and Human Services generally, and the Centers for Disease Control and Prevention (CDC) more specifically, play an active role in protecting the public health.

In addition, global organizations, both private and public play a pivotal public health role. The World Health Organization, Doctors Without Borders, Partners in Health, and others dedicate themselves to serving public health.

41 See Jacobson, 197 U.S. at 27 (noting that it was City of Cambridge officials who required the vaccinations). Having local governments make certain public health decisions also may take political pressure off elected state officials.

45 The Obama Administration, for example, established the White House National Security Council Directorate for Global Health and Security and Bio-defense, in an effort to prepare for future pandemics. See Deb Riechmann, Trump Disbanded NSC Pandemic Unit that Experts had Praised, AP NEWS (Mar. 14, 2020), https://apnews.com/ce014d94644e98b7203b873c56f80e9a [https://perma.cc/7ESU-C77J].

There is a plethora of examples of public health infrastructure at work. That infrastructure includes sanitation,\textsuperscript{49} plumbing,\textsuperscript{50} clean water,\textsuperscript{51} safe housing requirements,\textsuperscript{52} food safety,\textsuperscript{53} the keeping of vital statistics,\textsuperscript{54} environmental protections,\textsuperscript{55} disease reporting,\textsuperscript{56} and contact tracing.\textsuperscript{57} It also includes age restrictions on smoking and drinking, as well as taxing and spending rules that incentivize healthy behaviors while discouraging unhealthy ones.\textsuperscript{58} Public health laws also govern controversial measures like isolation and quarantine.\textsuperscript{59}

\textit{Jacobson} demonstrates why this is the case. The Court in \textit{Jacobson} noted the importance of protecting the community from a smallpox outbreak, the breadth of the state police power to accomplish that goal, and the necessity of subordinating individual liberty to the public good.\textsuperscript{60} The Court refused to permit one person's objection to a vaccine to endanger the larger community.\textsuperscript{61} \textit{Jacobson} does not stand alone. In \textit{Prince v. Massachusetts}, for example, the Supreme Court reaffirmed the importance of protecting the community.\textsuperscript{62} The risk of exposing the community to health hazards functions as a major counterweight to the liberty interests of an individual who does not want to abide by a vaccination requirement.\textsuperscript{63} Although \textit{Prince} involved a violation of child labor laws, the Court held that a mother could be prosecuted for violating those laws, notwithstanding her religious freedom claim.\textsuperscript{64} Again, protecting children outweighed the mother's individual claim of

Quarantine and isolation involve such an infringement on liberty that there is widespread agreement that they should be used only as a last resort. \textit{See} ACLU N.J., \textit{supra} note 37. Moreover, the United States has a history of discriminatory application of quarantine rules. \textit{E.g.}, Jew \textit{Ho} v. Williamson, 103 F. 10, 26 (C.C.N.D. Cal. 1900) (invalidating a quarantine of a twelve-block area of San Francisco for failure to segregate infected from uninfected people thereby increasing the risk of spreading the disease); Wong \textit{Wai} v. religious freedom.\textsuperscript{65} Other courts have come to similar conclusions. For example, bans on ferrets,\textsuperscript{66} motorcycle helmet requirements,\textsuperscript{67} restrictions on dangerous religious practices,\textsuperscript{68} and seat belt laws,\textsuperscript{69} among others, have been upheld.\textsuperscript{70} In these cases, individuals claimed a liberty right to engage in the challenged conduct, but the courts concluded that the public's well-being was paramount to individual claims.\textsuperscript{71} When we fail to protect one another, public health law recognizes that we fail to protect ourselves.

In addition to case law, a vast range of legislation designed to promote public health has been enacted. For example, the Affordable Care Act, while falling short of universal health coverage, was enacted to vastly expand access to health care, especially among the poor, through the expansion of Medicaid. It also provided access to the individual market for those who were not otherwise insured and prohibited health insurers from excluding or charging higher premiums for people with pre-existing conditions, for whom private insurance may have been

\begin{quote}
America at the end of the twentieth century was reeling under the weight of its newfound libertarianism: the collective be damned, all public health burdens and responsibilities fell to the individual. It was an odd paradigm and an about-face from the attitudes and sense of duty that had formed the foundation of American public health at the dawn of the twentieth century.

The nineteenth-century and early-twentieth-century creators of America's public health systems would have found this emphasis on individualism amid such grand prosperity shocking. For them, the health of a community was the key measure of its success. . . . "Everything which is detrimental to health or dangerous to life, under the freest interpretation, is regarded as coming within the province of the Health Department. So broad is the construction of the law that everything which improperly or unnecessarily interferes with the comfort or enjoyment of life . . . may become the subject of action on the part of the Board of Health."

Colorado Civil Rights Comm'n}, 138 S. Ct. 1719, 1723–24 (2018) (finding that the Commission showed anti-religious bias when it determined that the baker unlawfully discriminated against a gay couple by refusing to make their wedding cake); \textit{Wheaton College v. Burwell}, 573 U.S. 958 (2014) (holding that Wheaton College was not required to complete a government form to claim a religious exemption from contraception coverage); \textit{Burwell v. America at the end of the twentieth century was reeling under the weight of its newfound libertarianism: the collective be damned, all public health burdens and responsibilities fell to the individual. It was an odd paradigm and an about-face from the attitudes and sense of duty that had formed the foundation of American public health at the dawn of the twentieth century. . . .

The nineteenth-century and early-twentieth-century creators of America's public health systems would have found this emphasis on individualism amid such grand prosperity shocking. For them, the health of a community was the key measure of its success . . . . "Everything which is detrimental to health or dangerous to life, under the freest interpretation, is regarded as coming within the province of the Health Department. So broad is the construction of the law that everything which improperly or unnecessarily interferes with the comfort or enjoyment of life . . . may become the subject of action on the part of the Board of Health."

prohibitively expensive if it was available at all.\textsuperscript{72} The Emergency Medical Treatment and Labor Act (EMTALA) also provides a limited safety net. It allows any person to walk into an emergency room and be screened to determine whether he or she has an emergency medical condition.\textsuperscript{73} If there is an emergency medical condition, the patient must be stabilized before being discharged.\textsuperscript{74} Although its scope is limited, and emergency care is extremely expensive compared to preventive care, it is a link in the chain of public health safety measures. Medicare and Medicaid provide more broad-based safety nets to specific populations.\textsuperscript{75} Environmental legislation like the Clean Water Act and Clean Air Act are also designed to protect public health in the face of threats to the planet.\textsuperscript{76} Food safety is also an integral part of public health measures, as recognized by the Federal Food, Drug, and Cosmetic Act.\textsuperscript{77}

When public health works well, it is often invisible. For example, we take for granted that the water from our faucets is suitable for drinking. Only when that clean water infrastructure fails, as it did most famously in Flint, Michigan,\textsuperscript{78} is the failure of the public health infrastructure apparent.\textsuperscript{79} Similarly, we take for granted that certain diseases for which we have readily available immunizations are no longer public health threats. 2019, respectively, demonstrate the ongoing need to monitor and contain contagious diseases. There have been many other public health shortcomings. The failure to contain the Ebola outbreak in 2014, for instance, was an example of infrastructure weakness—this time in the global public health infrastructure. The virus primarily impacted the West African countries of Sierra Leone, Guinea, and Liberia, but also touched other countries, including the United States. With sufficient resources and commitment, the Ebola virus could have been contained months before it began to spiral out of control. The failure of developed nations to provide sufficient attention to the problem no doubt was caused by a variety of factors. Among them was apparent politicization of the WHO and its failure to declare the outbreak as a global emergency until August 2014, notwithstanding Ebola’s spread months earlier. This led noted New York Times columnist, Nicholas Kristof, to opine that the failure to contain the Ebola outbreak could be the “definitive humanitarian disaster of our generation.” That was before the many failures to adequately address Covid-19.

As a new coronavirus made its way from China to other parts of the world, the United States failed to take necessary preparedness steps despite its inevitable arrival here. For example, no efforts were made to purchase or stockpile needed medical equipment or supplies. Hospitals were left in dire need of such basic items as masks.

83 See Sack et al., supra note 81. In the end, more than 11,000 people died during the 2014 Ebola outbreak. 2014–2016 Ebola Outbreak in West Africa, supra note 82.

A severe shortage of ventilators also exacerbated the outbreak. Perhaps most importantly, the CDC chose not to use coronavirus tests that had been developed by the WHO and instead elected to centralize testing through the CDC. And the original tests distributed by the CDC were defective, so that precious time was lost before testing began. Both the decision to centralize testing and defects in the tests led to a testing shortage and delays in obtaining test results. Weeks after the public was assured that there would be sufficient tests for everyone, the shortage remained and even symptomatic patients could not necessarily access coronavirus tests. As a result, tracking the spread of the disease and having the ability to engage in contact tracing, isolating the sick, and quarantining those who were potentially exposed to the virus were public health tools that were not available as a practical matter. Instead, as Covid-19 rapidly spread, some states were effectively shut down, and the economy verged on collapse.

Both Ebola and Covid-19 highlight human interdependence—both domestically and globally. Neither was simply a disease impacting one isolated group of people far from the United States. Instead, both were and, in the case of Covid-19, still is

our problem as well. Infectious diseases respect neither geographic nor political boundaries.

Other public health shortcomings include over-prescribing antibiotics, which in turn creates health risks like antibiotic resistant strains of tuberculosis and the risk of a superbug that will be stronger than our strongest antibiotics. In addition, we arguably have not dedicated sufficient resources to the opioid/heroin drug addiction crisis plaguing the country. E-cigarettes are being sold freely despite containing chemicals that have not been sufficiently tested and that pose a risk to human health. We still fail to treat guns in America as a public health problem. As a result, gun control measures have generally been defeated at every turn, even those that have enjoyed widespread popularity. Food insecurity and inequity continue to adversely impact poor communities and communities of color. In addition, health care disparities based on race continue. Social determinants of health, including race and class, seem ever-present. For example, where you live (pollution), stresses of poverty, and access to healthy foods, among other things, impact our health.

When looking at social determinants of health, it has been said that "wealth equals
health."\footnote{Elizabeth Tobin-Tyler & Joel B. Teitelbaum, Essentials of Health Justice—A Primer xii (2019); see also Elizabeth H. Bradley & Lauren Taylor, To Fix Health, Help the Poor, N.Y. Times (Dec. 8, 2011), http://www.nytimes.com/2011/12/09/opinion/to-fix-health-care-help-the-poor.html?_r=1&scp=1&sq=to%20fix%20health%20care%20help%20the%20poor&st=cse [https://perma.cc/9F7E-29JE]. (arguing that the United States needs to spend more on social programs as a way of improving health outcomes and arguably saving money).}

Perhaps most importantly, the United States, unlike virtually every other developed country, does not provide universal health care coverage. While the Affordable Care Act expanded coverage and reduced the number of uninsured persons, there are still gaps in coverage. A seemingly intractable challenge is that health care has become one of the most politicized issues of our day.\footnote{Congress voted more than 70 times to repeal the ACA. Chris Riotta, GOP Aims to Kill Obamacare Yet Again After Failing 70 Times, NEWSWEEK (July 29, 2017, 6:53 PM), https://www.newsweek.com/gop-health-care-bill-repeal-and-replace-70-failed-attempts-643832 [https://perma.cc/B7KD-PMGW]. Although a total repeal of the ACA was unsuccessful, it has been chipped away at since the 2016 election. \id{Id}.} Thus, the attempt to expand health insurance coverage through the ACA is being undermined.\footnote{Nat'l Fed'n of Indep. Bus. v. Sebelius, 567 U.S. 519, 570 (2012).} Although the Supreme Court upheld the individual mandate pursuant to Congress's taxing power,\footnote{Id. at 584–85. Medicaid, a federal and state program designed to provide care to the poor, also falls short both in terms of who and what it covers. And a recent policy announcement to add a work requirement to Medicaid recipients is likely to exacerbate those shortcomings. Data suggests that most Medicaid recipients who are able to work already do so. Jared Bernstein & Hannah Katch, Trump's Medicaid Work Requirement Will Backfire, N.Y. Times (Jan. 11, 2018), https://www.nytimes.com/2018/01/11/opinion/trumps-medicaid-backfire.html?searchResultPosition=2 [https://perma.cc/RQXK-JFN6].} it held that the Medicaid expansion portion of the ACA was optional.\footnote{Medicaid Coverage in Your State, HEALTHINSURANCE.ORG, https://www.healthinsurance.org/medicaid/ [https://perma.cc/RSJ8-YKUK]. In National Federation of Independent Business v. Sebelius, the United States Supreme Court held that the Medicaid expansion provisions of the ACA could not be mandated; states could voluntarily expand their Medicaid programs, but they could not be required to do so. Sebelius, 567 U.S. at 584–85. The Medicaid expansion provisions of the ACA were designed to encompass a group of individuals who were traditionally excluded from Medicaid—childless adults under the age of 65 with low incomes. \id{Id} at 624. These individuals were traditionally not eligible for Medicaid no matter how poor they were. The ACA sought to correct this. In so doing, the federal government would pay 100% of the additional costs of the program through 2016.} As a result, some states have chosen not to expand their Medicaid programs, leaving millions of poor people uninsured, despite the fact that the federal government was going to pay for almost all of the expansion costs.\footnote{CBO's Analysis of the Major Health Care Legislation Enacted in March 2010: Testimony Before the H.}
the Tax Act of 2017 removed the individual mandate tax, undermining the mandate completely.\textsuperscript{107} Therefore, individuals can remain uninsured without financial consequence. In addition, undocumented immigrants are not covered under the Affordable Care Act,\textsuperscript{108} leaving another large population without timely access to health care. In perhaps the ultimate act of politicization, the Department of Justice is siding with a United States District Judge in Texas who declared the entire ACA unconstitutional, threatening the health care coverage of approximately 20 million people.\textsuperscript{109}

In addition to a failure to provide universal health coverage, we also do little to limit the cost of care.\textsuperscript{110} By contrast, virtually every other developed country limits health care to all human beings who will need health care during our lives. A single system that covers everyone would save on administrative costs and be more equitable.

Subcomm. on Health Comm. on Energy & Commerce, 112th Cong. 23 (2011) (statement of Douglas W. Elmendorf, Director, Cong. Budget Office). The federal government agreed to pay 95% in 2017, 94% in 2018, 93% in 2019, and 90% in 2020 and beyond. Id. Thus, the federal government’s contribution would never fall below 90 percent of the increased cost to the states. Id. The ACA, through the Medicaid expansion, would allow states to greatly expand insurance coverage for uninsured individuals while the federal government picked up almost the entire tab. Reasoning that this expansion was a change in Medicaid “in kind, not merely degree,” the Court held that States should be free to decide for themselves whether to participate in the expansion. Sebelius, 567 U.S. at 583. In reality, there is no good reason why any state would reject Medicaid expansion given the federal government’s subsidization of the cost.

Ideally, we should do away with separate programs targeted to different populations. We are all human beings who will need health care during our lives. A single system that covers everyone would save on administrative costs and be more equitable.

\textsuperscript{108} Samantha Artiga & Maria Diaz, Health Coverage and Care of Undocumented Immigrants, KAISER FAM. FOUND. (July 15, 2019), https://www.kff.org/disparities-policy/issue-brief/health-coverage-and-care-of-undocumented-immigrants/ [https://perma.cc/973X-6SK6]. Undocumented immigrants, like all human beings, are subject to ill health. Denying them the right to purchase health insurance via the exchanges not only deprives insurance companies of a larger insurance pool, which could lead to lower premiums for everyone, but it will likely increase the cost of care for people who are undocumented. Federal law requires that hospitals triage everyone who enters a hospital emergency room (assuming the hospital participates in Medicare) and stabilize emergency conditions. Emergency Medical Treatment and Active Labor Act, 42 U.S.C. § 1395dd (2018). Those who are uninsured are likely to wait longer to seek medical care, often using the emergency room as a last resort. As a result, by the time they show up, their underlying condition may be much more advanced and difficult and expensive to treat. EM TALA only requires that the patient be stabilized—not that he or she be treated for the underlying condition. Id. § 1395dd(b)(1)(A). By failing to see our shared humanity and the very real threat that we all have of accident and illness, we not only harm undocumented immigrants, but we harm ourselves in the process.

the cost of health care by controlling the prices that hospitals and health care providers can charge. While Medicare and Medicaid impose some price restrictions, our health care system is largely run as a free market enterprise, as illustrated by the high cost of prescription drugs.

Environmental protections are also being scaled back. The EPA, founded to protect us from the health risks associated with water and air pollution as well as the detrimental impact of climate change, is currently led by an administration that does not believe in its mission or in climate change. As a result, auto emissions standards are being relaxed and new oil drilling in the Atlantic is being encouraged, among other things. This may be the biggest public health failure currently confronting us.

In addition to shortcomings in public health law, courts also fail to protect the community when they perceive a public health claim as unduly interfering with business decision-making. When that happens, free market philosophy generally prevails. In Lochner v. New York, for example, the Supreme Court struck down a provision limiting the maximum number of hours per day that bakers could work, viewing the law as interfering with the right and freedom to contract with respect to working terms and conditions rather than as a public health measure. While the Supreme Court subsequently upheld the constitutionality of minimum wage laws, and other laws protecting workers, we continue to treat financial markets much more freely than health related regulations. Thus, courts have distinguished between what they perceive to be legitimate public health measures designed to protect the common good, on one hand, and economic provisions, on the other. In the latter instance, the Court generally fails to see a need to regulate for the common good. Public health law's objective—to keep communities healthy—stands in stark contrast to laws that impact financial well-being, laws that embrace an individualistic world view. The next Part explores that contrast.

$117,000 bill from an out-of-network doctor he never saw or met, but who was in the operating room during surgery.

115 See discussion infra Part II.

As set forth above, both the United States Constitution and state police power articulate goals of promoting the general welfare.\textsuperscript{119} Public health law is consistent with those goals and therefore works well as a legal paradigm because its objective is to maximize the common good, despite the fact that it sometimes falls short.\textsuperscript{120} While Part I explored the government’s role in protecting the general welfare in the context of public health, this Part examines the government’s role in protecting the general welfare financially. Unfortunately, in matters of financial well-being, laws at all levels of government take a relatively hands-off approach, leaving the economic well-being of the community largely on its own.

We take pride in a free market economy, in the freedom to contract, and in corporate doctrines like shareholder primacy. One argument favoring a free market economy is that it encourages innovation and creativity.\textsuperscript{121} Another is that it is a meritocracy, allowing individuals to succeed or fail based on their ability. If someone fails to pull him or herself up by the bootstraps, that is considered an individual failure rather than a structural one. In truth, however, capitalism is not a meritocracy.\textsuperscript{122} As currently structured, it is a system that perpetuates economic inequality. The United States has the highest levels of income inequality in the industrialized world:\textsuperscript{123}

In terms of income, between 1979 and 2014 the top 10 percent in the United States saw their wages rise by a third, while the median wage rose by just 8 percent and the bottom 10 percent flatlined. Today, twenty million Americans live in extreme poverty, members of one in twelve

American households go hungry, and . . . the proportion of US citizens living below the poverty line increased from 11 percent in 2000 to almost 16 percent in 2012. Joblessness, in terms of both unemployment and underemployment, has systematically worsened over the past decades. . . . Worse still, . . . the prospects of achieving social mobility and escaping economic destitution have fallen over time.124

Laws that support free market capitalism are not serving the general welfare. This is due in large part to the fact that we do not view financial well-being through the same lens of shared interdependence as public health laws. An array of laws reinforce the vast levels of inequality, from corporate and tax laws,125 to minimum wage laws,126 to contract law,127 and beyond. They ignore our financial interdependence, focusing instead on the individual. For example, the federal minimum wage remains stagnant at $7.25 per hour and has not been raised since 2009,128 showing little

See Sheryl Gay Stolberg & Jeanne Smialek, House Passes Bill to Raise Minimum Wage to $15, a Victory for Liberals, N.Y. TIMES (July 18, 2019), https://www.nytimes.com/2019/07/18/us/politics/minimum-wage.html (providing a state minimum wage analysis). Instead of a minimum wage, the law should be set at living wage with automatic increases for inflation. Successful corporates often benefit from a low minimum wage through what is effectively corporate welfare. See Barry Ritholtz, The Minimum Wage and McDonald’s Welfare, BLOOMBERG (Dec. 17, 2013, 7:46 AM), https://www.bloomberg.com/opinion/articles/2013-12-17/the-minimum-wage-and-mcdonald-s-welfare (discussing McDonald’s and Wal-Mart as examples). Corporate welfare is alive and well, and there is little, if any, stigma associated with it. Meanwhile, however, the individual who falls on hard times and needs government assistance is frequently made to feel inadequate. Thus, corporations keep their labor costs down while their employees qualify for welfare programs like Medicaid, programs that rely on taxpayer support. Id. Moreover, those most in need are likely to be subject to the harshest rules. For example, those whose credit rating slips are likely to be charged higher rates of interest when they can least afford it, while the wealthy can pay lower interest rates, or no interest at all, because they can afford to avoid debt. In public health, by contrast, officials tend to the neediest among us. Meanwhile top corporate executives are included on the Forbes 400 list. Corporate resistance to higher wages is arguably based, at least in part, on the doctrine of shareholder primacy. With a sole focus on shareholder primacy, the mission becomes one of maximizing profits, with a focus on the next quarterly report. With a broader mission, the focus could be on reasonable, rather than maximum, profitability while serving the well-being of employees, customers and the community at large, as well as its shareholders. We may also want to reevaluate what jobs we value most. Why, for example, do we value investment bankers and hedge fund operators, who move money around, more than we value
concern for those stuck in minimum wage, poverty-level jobs. Not only is the minimum wage insufficient to permit workers who earn it to live a dignified life,129 but many employers keep employee hours below full-time status, further limiting their ability to earn living wages.130 In addition, analysts uniformly note that the 2017 Tax Cut and Jobs Act131 favors the wealthy, despite the fact that the wealth of those at the top of the income scale have benefited disproportionately in recent decades.132 Moreover, it is exploding the federal deficit.133 In fact, leading legislators who voted for the 2017 tax law turned around almost immediately to support cutting social programs in the name of fiscal responsibility.134

A quintessential example of the individualism that undergirds our free market society is the corporate doctrine of shareholder primacy. While a corporation cannot be successful without a community of employees and customers, the shareholder primacy doctrine suggests that publicly traded corporations exist solely to benefit their owners, that is to maximize shareholder value.\textsuperscript{135} This has been a prevailing view of corporate purpose for many years.\textsuperscript{136} In \textit{Dodge v. Ford Motor Co.}, a case often cited to bolster this argument, the court stated, "[t]here should be no confusion . . . . A business corporation is organized and carried on primarily for the profit of the stockholders. The powers of the directors are to be employed for that end."\textsuperscript{137} Notwithstanding \textit{Ford Motor}, others have argued that there is no solid legal foundation for shareholder primacy: "[T]he law gives [corporate boards] a wide range of discretion to run public corporations with other goals in mind, including growing the firm, creating quality products, protecting employees, and serving the public interest. Chasing shareholder value is a managerial choice, not a legal requirement."\textsuperscript{138}

\begin{raggedright}

\textsuperscript{134} Compare A. A. Berle, Jr., \textit{For Whom Corporate Managers are Trustees: A Note}, 45 HARV. L. REV. 1365, 1365 (1932) (advocating for shareholder primacy), with E. Merrick Dodd, Jr., \textit{For Whom are Corporate Managers Trustees?}, 45 HARV. L. REV. 1145, 1163 (1932) (suggesting a concept of corporate purpose broader than maximizing shareholder value).  

\textsuperscript{136} STOUT, supra note 25, at 4. The business judgment rule also gives corporations substantial latitude to adhere to or dismiss shareholder primacy as they see fit. Compare Ian B. Lee, \textit{Efficiency and Ethics in the Debate About Shareholder Primacy}, 31 DEL. J. CORP. L. 533, 533 (2006) (examining two theories that have called into doubt the general consensus of the shareholder primacy doctrine), with Stephen M. Bainbridge, \textit{In Defense of the Shareholder Wealth Maximization Norm: A Reply to Professor Green}, 50 WASH. & LEE L. REV. 1423, 1423–24 (1993) (arguing that the shareholder primacy doctrine is still the norm); see also Hedrick Smith, \textit{When Capitalists Cared}, N.Y. TIMES (Sept. 2, 2012), https://www.nytimes.com/2012/09/03/opinion/henry-ford-when-capitalists-cared.html [https://perma.cc/H3GD-DR9U] (noting that Henry Ford believed that paying his workers well was "a matter of social justice . . . [and] smart business . . . business is more secure because workers earn enough to become good customers").
Indeed, for much of our history, corporations viewed their missions much more broadly, as encompassing these other constituencies. For example, “providing secure jobs for employees, quality products for consumers, and contributions to the broader society” were once considered the norm. Not only is maximizing shareholder value not legally required, it is arguably a flawed policy for all involved. Without dedicated employees and loyal customers, businesses could not survive. Therefore, it is in both the corporation’s interest and in the employees’ interest that widespread economic justice for workers always be regarded as a fundamental part of the equation. This would include providing employees with a living wage and a healthy work environment. Moreover, if the government fails to provide universal health coverage, corporations should continue to provide it for their employees, as needed.

Instead, however, corporations consistently seek to lower labor costs, paying the bulk of the workforce relatively little, while senior executives are paid astronomical salaries. Corporate boards look abroad, seeking the lowest paid labor force. Stock options and other benefits simply serve to widen the gap between executive pay and the average worker. For example, Jeff Bezos, the founder and CEO of Amazon, is reportedly the richest man in the world. His net worth is estimated at

141 This fact has been brought into stark relief by the novel coronavirus that causes Covid-19. With many nonessential businesses closed, and individuals sheltering in their homes, the economy largely stalled in the first three months of 2020, with some experts predicting a coming depression as the virus continues to spread. Ezra Klein, How the Covid-19 Recession Could Become a Depression, Vox (Mar. 23, 2020, 9:20 AM), https://www.vox.com/2020/3/23/21188900/coronavirus-stock-market-recession-depression-trump-jobs-unemployment [https://perma.cc/IZY7-Y9SK].

143 In the garment industry, for example, companies often move production to countries with the lowest wages simply to maximize profits. Report: Ethiopia’s Garment Workers are World’s Lowest Paid, CNBC (May 7, 2019, 5:47 AM), https://www.cnbc.com/2019/05/07/report-ethiopias-garment-workers-are-worlds-lowest-paid.html [https://perma.cc/NK2L-88CB] (explaining that Ethiopian garment workers are paid the equivalent of approximately $26 per month). There is a growing awareness on the part of consumers to consider where their clothes are manufactured and how the workers are treated. See Seven Forms of Sustainable Fashion, GREEN STRATEGY, http://www.greenstrategy.se/sustainable-fashion/seven-forms-of-sustainable-fashion/ [https://perma.cc/R8Z5-FKNQ]. The garment industry is not alone. Lizzie O’Leary, The Modern Supply Chain is Snapping, ATLANTIC (Mar. 19, 2020), https://www.theatlantic.com/ideas/archive/2020/03/supply-chains-and-coronavirus/608329/ [https://perma.cc/V65G-Y16J] (“We’ve built a global supply chain that runs on outsourcing and thin margins, and the coronavirus has exposed just how delicate it is.”).

between 130–150 billion dollars.\textsuperscript{145} And Amazon’s profit last year was reportedly over 10 billion dollars, on which the company will pay zero dollars in taxes.\textsuperscript{146} Yet the median annual compensation of Amazon workers is only $28,446.\textsuperscript{147} And Amazon has resisted employee efforts to unionize.\textsuperscript{148} Moreover, in seeking to select a site for a second headquarters, Amazon sought an extensive corporate welfare package that it clearly did not need.\textsuperscript{149}

In addition to its need for employees, Amazon needs customers to thrive. It also needs workers who can efficiently package and deliver orders to those customers. Without a community of workers and customers, Amazon would cease to exist. Structurally, therefore, Amazon’s constituencies, like those of other corporations, consist not only of investors/shareholders, but also include workers, customers, and the community at large. Yet the interdependence of these communities is often overlooked, with the corporate focus limited to the next quarterly earnings report. By

neglecting corporate constituencies beyond shareholders, the shareholder primacy doctrine erodes the sense of shared purpose that is always a concern of public health law.\(^{150}\)

Amazon is but one example of a corporate structure that fails to consider the collective. There are other powerful corporations that engage in similar practices. We are living in an age of mega corporations that wield extraordinary influence, economically, socially, and politically.\(^{151}\) Meanwhile, there is no place in America where a person can afford a two-bedroom apartment on the federal minimum wage.\(^{152}\) Some companies have now announced increased minimum wages for their lower income workers, perhaps responding to public discourse over the inadequacy of the federal minimum wage.\(^{153}\)

In addition to its adverse impact on workers, shareholder primacy also leads to practices that are not necessarily consumer friendly. Companies shield themselves from liability in ways that limit consumer recourse, for example, through clickwrap agreements that courts have enforced, despite the virtual impossibility of providing true consent to the terms.\(^{154}\) These agreements and others often include binding arbitration clauses, which are pervasive in consumer transactions, thereby depriving

aggrieved customers of access to court. They also often include terms that require consumers to give up a certain amount of privacy. In short, workers and customers, as well as society at large, are not considered part of a community to be served, but as a community to be exploited. Legally, we have made a choice to let that free market reign.

This sink or swim attitude toward financial well-being is getting worse. For example, while the Consumer Financial Protection Bureau (CFPB) was created specifically to protect consumers from predatory financial practices, it is currently being undermined. The CFPB was the brain child of Elizabeth Warren, who first proposed it in 2007. Following the great recession of 2008, it was abundantly clear that consumers needed assistance. The CFPB was designed to do in the financial sector what public health law does with respect to health: protect the public. The idea behind its creation was to improve the regulatory structure of mortgages, student loans, and other financial products. It was a big step toward protecting everyday consumers. It was also controversial from the outset. Once President Obama left office, his successor appointed Mick Mulvaney as Director of the CFPB, a leader who fundamentally disagreed with its very existence. He requested a zero dollar

156 See supra notes 142–143 and accompanying text. IN A MEETING IN WHICH COMMUNITY LEADERS URGED THE CFPB TO REGULATE PAYDAY LOANS, THE DIRECTOR REPORTEDLY OPINED THAT "[I]T WASN'T UP TO THE FEDERAL GOVERNMENT TO STOP PEOPLE FROM TAKING THE KIND OF CREDIT THAT SUITED THEM." IN OTHER WORDS, THE CFPB IS LETTING THE MARKET FLOW FREELY WITH MINIMAL GOVERNMENTAL OVERSIGHT. THIS ABANDONMENT OF ITS MISSION TO PROVIDE CONSUMER FINANCIAL PROTECTION IS A STEP BACKWARD AND REFLECTS AN IDEOLOGY THAT IN MATTERS OF PERSONAL FINANCE, THE FEDERAL GOVERNMENT WILL TAKE A HANDS-OFF APPROACH. THIS VIEW MUST BE RE-EXAMINED AND MODIFIED TO ACHIEVE ECONOMIC JUSTICE. RATHER THAN SERVING THE GENERAL WELFARE, FREE MARKET CAPITALISM HAS RESULTED IN EXTREME ECONOMIC INEQUALITY. now wield “more power than at any time since Watergate, while many of the rest seem to be disengaging from politics.”

“This is perhaps the most troubling result of Citizens United: in a time of historic wealth inequality,” . . . “the decision has helped reinforce the growing sense that our democracy primarily serves the interests of the wealthy few, and that democratic participation for the vast majority of citizens is of relatively little value.”

In the midst of this inequality, the average worker is being left further and further behind. Corporations often resist paying average workers higher wages that they could easily afford.

As a nation of laws, it is essential that those laws be just and fair because unjust laws undermine society itself. It is also critical that they be equitably

170 Some companies have now announced increased minimum wages for their lower income workers, arguably responding to public pressure resulting from increased discourse over the struggles of low wage workers. See Courtney Connelly, Amazon, Facebook and 8 Other Companies that have Committed to Raising their Minimum Wage, CNBC (May 25, 2019, 9:30 AM), https://www.cnbc.com/2019/05/24/glassdoor-10-companies-that-have-committed-to-raising-minimum-wage.html [https://perma.cc/Z4UC-SVL6]; Erik Sherman, Why Did Amazon Raise Its Minimum Wage to $15? 171 Marbury v. Madison, 5 U.S. 137, 163 (1803) (“The government of the United States has been emphatically termed a government of laws, and not of men.”). For example, slavery was once legal, and the extreme injustice of that legal paradigm led to a civil war. While there is apparently a narrative that the Civil War was fought over states’ rights, it was, in fact, a war fought over slavery. Frank James, Slavery, Not States’ Rights, Caused Civil War Whose Political Effects Linger, NPR (Apr. 12, 2011, 4:42 PM), https://www.npr.org/sections/itsallpolitics/2011/04/12/135535655/slavery-not-states-rights-was-civil-wars-cause [https://perma.cc/2HUV-MA5C]. Laws permitting slavery, the 3/5ths clause, Dred Scott and Jim Crow laws, and others that treated blacks as “the other,” were ultimately struck down—both because of the African American community’s continued resistance and because of many others who also resisted. See Kenneth R. Janken, The Civil Rights Movement: 1919–1960s, TEACHERSERV, http://nationalhumanitiescenter.org/serve/freedom/1917beyond/essays/crm.htm [https://perma.cc/6CH5-2ZA7]. Laws focused on race were not the only unjust laws. Poverty laws, for example, tend to incorporate onerous requirements because of the small percentage of people who would abuse the safety net, rather than focusing on the majority who follow the rules but simply need assistance. For example, the new rule that Medicaid recipients must work ignores the fact that most Medicaid recipients who can work already do so. Those who cannot work will still have health care needs that must be addressed. Judith Solomon,
enforced. Yet as noted above, corporations, which are legal entities created and permitted to exist by state law, do not view their mission as one that should help the entire community. They are largely free to run themselves with little regard for the general welfare. Because the state, through its police power, is charged with protecting public health, safety, and welfare, state law and policy governing corporations should also serve the public good. Otherwise the legal system is complicit in perpetuating inequality.

While states engage in minimal corporate oversight, corporations have become enormously powerful. They are considered persons and can even assert the right to religious freedom. They exercise their wealth and power in numerous ways, including by lobbying for and even drafting desired legislation. Corporate directors are often handsomely paid and legally protected from many of their actions. Any number of examples highlight the ways in which our laws have been unjustly applied. See generally, e.g., MICHELLE ALEXANDER, THE NEW JIM CROW: MASS INCARCERATION IN THE AGE OF COLORBLINDNESS (2012) (detailing injustice in the criminal justice system); ROTHSTEIN, supra note 122 (describing the history of de jure discrimination in housing); Brian Mann, The Drug Laws that Changed How We Punish, NPR (Feb. 14, 2013, 3:04 AM), https://www.npr.org/2013/02/14/171822608/the-drug-laws-that-changed-how-we-punish (discussing the Rockefeller drug laws); DEBORAH J. The list goes on.

Corporations exist because they are legally permitted to do so by the state: A corporation is a government-defined legal structure for doing business. A corporation is created and defined by state legislatures to advance what the state deems to be in the public interest. Corporations as entities are government policy tools; only government makes incorporation possible. Unlike other associations or ways of doing business, a corporation cannot exist by private arrangement.

JEFFREY D. CLEMENTS, CORPORATIONS ARE NOT PEOPLE—WHY THEY HAVE MORE RIGHTS THAN YOU DO AND WHAT YOU CAN DO ABOUT IT 60 (1st ed. 2012) (footnote omitted).

In the context of reviewing two books, one from the left and one from the right, Hasen notes: The books demonstrate that lobbying can thwart the public interest, especially when players with much at stake use lobbyists to block or alter legislation . . . . Both books illustrate that much of the problem is the combination of money, politics, and lobbying stems from what is legal, not illegal. . . . The real concern should be less with exchanges of dollars for political favors and more with the decline in national economic welfare that occurs thanks to lobbyist-facilitated rent-seeking.

Many large corporations pay their directors hundreds of thousands of dollars per year. See Douglas A. McIntyre & Samuel Weigley, The 12 Companies with the Highest-Paid Boards of Directors, 24/7 WALL ST. (June 7, 2012, 6:19 AM), https://247wallst.com/special-report/2012/06/07/the-12-companies-with-the-highest-paid-boards-of-directors/ ("More than a dozen public company boards had directors whose compensation averaged more than $500,000 in 2011.")
business decisions through the broad range of discretion afforded them under the
business judgment rule. “Under the business judgment rule, in the absence of bad
faith, fraud, illegality or gross overreaching, courts will not interfere with the
exercise of business judgment by corporate directors.” Thus, corporate board
members can easily avoid liability even when their decisions are deeply flawed.

These are just some of the shortcomings of a free market paradigm as currently
constituted. Instead of continued focus on individualism, we can begin to think of
money as medicine—as something needed in just proportions to serve the larger
community. It was recently reported, for example, that approximately 40% of
Americans cannot afford a $400 emergency. The Occupy Movement was, in part,
an effort to highlight the chasm between the 99% and the 1%. Today, three men
own as much wealth as the bottom half of all Americans. While these three men
may be outliers, even the wealthiest individuals need a functioning society to support
that wealth, whether it is a need for customers, workers, strong infrastructure, or a
stable enough society to avoid rebellions.

Just as we are linked when it comes to public health, we are also financially
interdependent, even when we fail to recognize it. It is not acceptable that so many
of our fellow human beings are living at or near the poverty level. The goal should
be to help everyone achieve economic justice. Viewing the financial community
more broadly will lead to legal and normative changes that will enhance the quality
of life for a greater swath of society. This will be a natural outgrowth of the law when
we address the needs of the many rather than those of the few. This is why the public

181 One scholar discussed how capitalism has led to extreme inequalities in wealth:

We live in a revolutionary moment. The disastrous economic and political experiment that
attempted to organize human behavior around the dictates of the global marketplace has failed.
The promised prosperity that was to have raised the living standards of workers through trickle-
down economics has been exposed as a lie. A tiny global oligarchy has amassed obscene
wealth, while the engine of unfettered corporate capitalism plunders resources; exploits cheap,
unorganized labor; and creates pliable, corrupt governments that abandon the common good to
serve corporate profit.

CHRIS HEDGES, WAGES OF REBELLION: THE MORAL IMPERATIVE OF REVOLT 1 (2015). Hedges goes on to note that “[t]he citizen has become irrelevant. He or she can participate in heavily choreographed elections, but the demands of corporations and banks are paramount.” Id.
health law approach of addressing the well-being of the community can, and arguably should, be applied universally. The law is a vessel that we put our values into. Using public health law as a paradigm, there would always be a focus on the well-being of the community, whether the issue is one of economic justice, criminal justice, racial justice, or some other area of concern.

As President John F. Kennedy has said, "a rising tide lifts all the boats." When those at the bottom of the economic ladder are doing well, they help stimulate the entire economy. They can purchase the goods and services that businesses offer. Those who are free from the daily stresses of poverty or near poverty conditions enjoy better health and miss fewer days of work, and people whose basic needs are assured are freer to think creatively about more than simply making it from one day to the next. In order to improve, a new paradigm—one that recognizes our shared common good in financial matters—a progressive capitalism—must be implemented. Individual rights are important, but extreme individualism without regard to the greater community can be devastating, be it a contagious disease or a diseased economy. In the case of the economy, the wealthy often fail to appreciate that their well-being is inextricably intertwined with their less wealthy counterparts. That is incorrect.

Two examples demonstrate the point. First, consider what would happen if all Amazon fulfillment center employees went on strike. This would arguably bring Amazon to its knees very quickly. Amazon would be unable to fill orders, and customers would purchase from competing vendors. To avoid such a scenario, Amazon could try to discourage collective bargaining, unionization, and other worker efforts to expand their rights by joining together. Alternatively, it could welcome collective bargaining, recognizing that without its workers, it would be unable to serve its customers. By engaging in a dialogue of mutual respect and understanding, and acknowledging their shared well-being, Amazon could meet reasonable requests of its employees and perhaps lower its turnover rates and enjoy a much better reputation as an employer and as a corporate citizen. Its sales might increase as a result because there are increasing numbers of socially conscious consumers who endeavor to make responsible purchasing decisions. This includes purchasing from companies that honor their workers, the larger community, and the environment.

184 For example, by focusing on the collective well-being, we would re-evaluate our criminal justice system to explore not only why we criminalize so many non-violent behaviors, but also how we treat those who are incarcerated. See generally MICHAEL B. MUSHLIN, RIGHTS OF PRISONERS (5th ed. 2019).

187 See, e.g., Jacobson v. Massachusetts, 197 U.S. 11, 29 (1905) (recognizing that the threat of smallpox, a highly contagious and deadly disease, made clear to the populace that its collective well-being was inextricably intertwined).

188 Stiglitz, supra note 21.

A second, non-corporate example of our interconnectedness is that of the New York City sanitation workers' strike in 1968. After a nine-day strike, New York City met the sanitation workers' demands, and the strike ended:

It takes a week before the realization begins to kick in: The garbagemen are actually going to win. "New York is helpless before them," the editors of the New York Times declare despairingly. "This greatest of cities must surrender or see itself sink in filth." ... Time magazine later reported, [] "that it pays to strike." 

While Wall Street bankers and others in the financial industry may think little of the workers on the ground who keep the city functioning, those workers are indispensable—not just sanitation workers, but those who transport workers to and from their jobs, teachers, cooks, and others. This has become abundantly clear during the coronavirus pandemic of 2020. During a single week in March, a record 3 million people applied for unemployment insurance, and with many nonessential businesses closed, much of our consumer-driven economy came to a halt. The federal government passed a 2 trillion dollar stimulus package to avert an economic collapse, and more measures are needed. It has taken a public health emergency for us, as a society, to see, at least for this moment in time, that we are interconnected both with respect to health and wealth.

The vast income and wealth inequality we are experiencing today is, in part, a consequence of failing to view the system holistically, to ensure that all workers share in our prosperity. One effort to highlight the true health or lack thereof in the economy is the introduction of a senate bill that "would direct the Bureau of Economic Analysis, which produces estimates of gross domestic product, to produce estimates telling us who benefits from growth." We know that even in matters involving private enterprise and financial wellness, the government has a role to play to achieve economic justice. The next section explores possible solutions.

194 The federal government often intervenes into private corporate affairs when it feels there is a strong public policy interest in doing so. See, e.g., Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, § 929-Z, 124 Stat. 1376, 1871 (2010) (codified at 15 U.S.C. § 78o (2018)) (noting that the purpose of the act is to "improv[e] accountability and transparency in the financial system," “to end ‘too big to fail,’” and to “end[] bailouts”); David John Marotta, The Purpose of the Federal Reserve, FORBES (May 10, 2014, 12:00 AM), https://www.forbes.com/sites/davidmarotta/2014/05/10/the-purpose-of-the-federal-reserve/ [https://perma.cc/6U7G-3AZ6]. III. "WHAT IF MONEY COULD HEAL US?"

"A progressive capitalism based on an understanding of what gives rise to growth and societal well-being gives us a way out of this quagmire and a way up for our living standards."  

There are a multitude of ideas for transforming our economic system into one of "progressive capitalism"—one that addresses our collective, economic well-being. For example, a more progressive tax code would further the goal of financial equity. As noted above, the 2017 tax law is designed to do the opposite—it continued the trend of helping the well-to-do over others, thus continuing to widen the income gap. During Elizabeth Warren’s presidential campaign, she proposed a 2% wealth tax on those with fortunes of more than $50,000,000. This would have been a step toward reducing inequality, and the added tax revenue would have helped ordinary people by expanding access to higher education, among other things. We could also add greater fairness to our tax system by eliminating loopholes that favor the wealthy, like that for carried interest. Increasing the top tax rate to 70% is another progressive income tax proposal. Changing long-standing corporate narratives and policies that support
Implementing a universal basic income could also help alleviate poverty and narrow the income gap.\textsuperscript{204} This could be especially useful for those whose jobs have been displaced by technology. Increasing the minimum wage would be another step forward, as would broad-based student loan forgiveness.\textsuperscript{205} Expanding social security and re-thinking 401k plans rather than pensions could also be part of the mix,\textsuperscript{206} given that the 401k approach leaves millions unable to retire.\textsuperscript{207} All these ideas would help to spread the wealth of the nation among a broader swath of society. In this manner, these proposals are consistent with the purpose of public health law in that they demonstrate concern for everyone.

This Article focuses on two areas that have received less attention. First, it proposes changes to rules regarding board composition and accountability. It suggests that we eliminate the business judgment rule in matters of executive compensation and that employees elect forty percent of corporate board members.\textsuperscript{208} Second, keeping in mind that political and economic powers are intertwined, this

\textsuperscript{203} A number of CEOs have recently acknowledged a broader corporate purpose than shareholder primacy. See supra note 139.

### A. Board Composition and Accountability

i. Eliminate the business judgment rule in matters of executive compensation

One step toward progressive capitalism would be to eliminate the business
judgment rule on matters of executive compensation. The business judgment rule
protects decisions made by boards of directors as long as they adhere to proper
procedures and act in good faith.\(^\text{210}\) This makes it very difficult to impose liability
on corporate directors and, as a result, their substantive decisions are rarely
challenged. As long as the directors seek expert advice and follow it, they are
unlikely to face liability. When it comes to executive compensation, the only thing
at issue is basic common sense, not some esoteric question, for example, of whether
a particular board decision is legal under tax or fraud and abuse laws.\(^\text{211}\) As a society,
we can take the equivalent of judicial notice to determine when a salary is
unreasonably high. By eliminating the business judgment rule for executive
compensation decisions, we can place the burden on the directors to justify those
compensation decisions.

In fact, an executive compensation package that pays executives more than 50
times the average worker’s salary could be considered presumptively unreasonable.
Even this level of compensation sounds unreasonably high. But many corporate
executives earn much more. “Americans, on average, think that corporate C.E.O.s
are paid about 30 times as much as ordinary workers, which hasn’t been true since
the 1970s. These days the ratio is more like 300 to 1.”\(^\text{212}\) This was not always the
case, as Nobel Prize winning economist Paul Krugman\(^\text{213}\) noted:

> There was a time when asking who benefits from economic growth didn’t
> seem urgent, because income was rising steadily for just about everyone.
> Since the 1970s, however, the link between overall growth and individual
> incomes seems to have been broken for many Americans. On one side,
> wages have stagnated for many; adjusted for inflation, the median male

worker earns less now than he did in 1979. On the other side, some have seen their incomes grow much faster than the income of the nation as a whole. Thus C.E.O.s at the largest companies now make 270 times as much as the average worker, up from 27 times as much in 1980.\textsuperscript{214}

Corporate board members who sit on compensation committees should have to justify executive compensation packages without the protection of the business judgment rule. Yet, courts have routinely protected directors' executive pay decisions, relying on the business judgment rule.\textsuperscript{215} Directors' fiduciary duty to the corporation should require both their independence and reasonable decision-making, not simply a process that makes the decision seem appropriately deliberative, as is often the inquiry under the business judgment rule. The business judgment rule should not be used as a tool to elevate form over substance.\textsuperscript{216} As state-created and approved entities subject to state laws, corporations should be held accountable. States can change their interpretation of the business judgment rule when it comes to pay disparities, recognizing that it is not serving large segments of the community. States' police power arguably requires them to provide better oversight, not just over executive compensation, but also over the general welfare.\textsuperscript{217}

Limiting executive compensation will still permit corporate executives to enjoy substantial wealth. It would simply be a small measure to assist the larger corporate community. In some cases, it would mean that when the CEO gets a raise, the average worker would get one as well. It is hard to imagine, for example, that Jeff Bezos would suffer or become less creative if he shared some of his many billions of dollars of wealth with Amazon workers by raising average employee wages. He would simply share a larger portion of profits with workers who make amazon.com and, therefore, Bezos' success possible. Even CEOs have only 24 hours in a day. To suggest that their time is worth 300 times more than the average worker strains credulity.\textsuperscript{218}

In conjunction with holding corporate directors more accountable for executive compensation, there should be greater salary transparency. In order to know what the gap is between executive and average worker compensation, salary data must be kept

\textsuperscript{214} Krugman, \textit{supra} note 166.

\textsuperscript{216} See Sample v. Morgan, 914 A.2d. 647, 650–53 (Del. Ch. 2007) (holding the business judgment rule not applicable where a newly formed committee approved a compensation package formulated by the CEO after a mere 20 minutes of deliberation). Compensation fairness should be based on the merits, not just on whether the board dotted its i's and crossed its t's.

\textsuperscript{217} As noted above, states' police power to protect the public health, safety, and welfare has been broadly construed. \textit{See} Jacobson v. Massachusetts, 197 U.S. 11, 25 (1905).

\textsuperscript{218} Moreover, the myth of trickle-down economics has been shown to be just that—a myth. Press Release, Oxfam International, Inequality Trapping Hundreds of Millions in Extreme Poverty (Sept. 20, 2015), https://www.oxfam.org/en/pressroom/pressreleases/2015-09-21/inequality-trapping-hundreds-millions-extreme-poverty [https://perma.cc/F7KQ-UYKS].
and disclosed. Salary transparency not only provides additional information overall, but can allow women and people of color, individuals whose salaries are routinely found to be a fraction of white men, to demand salary equity. In addition to eliminating the business judgment rule on matters of executive compensation, there are some existing guidelines that can help narrow the gap between CEO and average worker pay. The SEC, for example, requires companies to report the pay ratio between CEOs and average workers, creating some level of transparency. In addition, the New York Stock Exchange requires a level of independence on the part of board members of corporations listed on the exchange. While these are steps in the right direction, eliminating the business judgment rule for executive compensation decisions would be a substantial improvement in corporate governance.

ii. Workers Should Elect 40% of Board Members

Second, workers should be given a greater role in selecting corporate board members. Elizabeth Warren has proposed that workers elect 40% of the board members of large corporations. As discussed above, large corporations enjoy outsized influence in America. But it is not the average worker employed by corporations who benefits from that outsized influence. Power lies with top executives and board members who make key decisions. If employees elected 40% of the board members, the board members, by necessity, would be more accountable to those employees. This will arguably give them a different insight into and concern for all corporate constituencies, leading to more widespread benefits. This will also make them better corporate citizens.

Giving employees greater input into board composition, and therefore making board members accountable to them, will also strengthen their ability to engage in collective bargaining. Union membership has declined significantly in recent years.

---

222 We should “transform[] large American companies by letting their workers elect at least 40% of the company’s board members to give them a powerful voice in decisions about wages and outsourcing.” What Elizabeth Will Do, WARREN FOR PRESIDENT, https://elizabethwarren.com/plans [https://perma.cc/6QRT-GFA7].
So has collective bargaining. But there is strength in numbers, and employees could engage in more effective advocacy by joining together. With board accountability to employees and unions, the board is more likely to treat workers fairly. Our cultural norm is to pit labor against corporate executives, despite the fact that they are all working for the benefit of the corporation. It is not just employees, but employers, who can benefit from employee organizing. Rather than viewing employees’ use of collective bargaining as a threat, it can be viewed as a valuable form of communication. By working with union or other employee representatives, employers can do a better job of keeping its workforce content, leading to greater productivity and lower turnover rates, among other things.

The National Labor Relations Act (NLRA) gives employees a general right “to engage in [] concerted activities for the purpose of collective bargaining or other mutual aid or protection.” It also gives them a specific right to strike: “Nothing in this [act], except as specifically provided for herein, shall be construed so as either to interfere with or impede or diminish in any way the right to strike, or to affect the limitations or qualifications on that right.”

If and when communications break down between an employer and its employees, the right to strike can be a very effective tool, as can the right to boycott. Striking can demonstrate to employers the importance of employee concerns. It can be effective even when it is illegal, as was the case of the sanitation workers’ New York City strike in 1968. Even a strike or walkout of limited

One reason for the decline is globalization. Id. Corporations can seek the lowest paid, and least demanding, employees not just domestically, but internationally as well. Id. Nonetheless, in many other countries, unionization rates remain high as does collective bargaining, even in the absence of unions. Id.
224 Webber describes the typical strike as follows:

[The CEO would announce a steep pay cut for workers. The cut would be so sharp that it would be too demoralizing to return to work without a fight. . . . So the workers would strike.

. . . The CEO would wait and wait, knowing exactly what the strike would cost his workers—more than it would cost him. That’s how he would play it, by the numbers, by the math . . . . In time, the workers would vote to accept his offer and get back to work before things got even worse, to agree to some face-saving concessions and move on with their lives.

227 The National Labor Relations Board stated:

[It is lawful for a union to urge employees of a secondary supplier at the primary employer’s plant not to cross a picket line there. Section 8(b)(4)(B) also does not proscribe union action to prevent an employer from contracting out work customarily performed by its employees, even though an incidental effect of such conduct might be to compel that employer to cease doing business with the subcontractor.

228 See supra notes 190–92 and accompanying text. Many states prohibit public employees, like sanitation workers, from striking. See, e.g., New York’s Taylor Act, N.Y. CIV. SERV. LAW § 210 (McKinney 2019). Arguably, all public employees who provide vital services should also enjoy the right
duration can be quite effective.\textsuperscript{229} For example, in 2012, fast food workers began a series of walkouts in their "fight for $15."\textsuperscript{220} The walkouts highlighted the substandard wages earned by many fast food workers and created a national conversation about raising the minimum wage. Now, virtually every Democratic candidate for president embraces a $15 (or higher) minimum wage. A fifteen-dollar minimum wage also enjoys widespread popularity throughout the country. All of these labor actions would be enhanced by board accountability to workers.

Boycotting is another powerful tool.\textsuperscript{231} The NLRA permits employees to boycott, within limits, although secondary or sympathy boycotts are prohibited.\textsuperscript{232} Consumers, of course, can also boycott.\textsuperscript{233} With conscious consumerism on the rise, many people will, with adequate information and organization, boycott companies to better protect the larger community. The key challenge to boycotting is effective organization because a single individual who chooses to boycott will have no impact.

Notwithstanding the concerted activity protection provided by the NLRA, state "right to work" laws can and have weakened union bargaining power. Right to work laws prohibit employers from mandating union membership or requiring employees to strike. In fact, in the most recent government shutdown, it was only when air traffic controllers stayed home that the government was pressured to reopen. Ellie Kaufman & Rene Marsh, The Government Shutdown Ended After Only 10 Air Traffic Controllers Stayed Home, CNN (Feb. 6, 2019, 5:56 PM), https://www.cnn.com/2019/02/06/politics/ten-air-traffic-controllers-shutdown/index.html [https://perma.cc/62PS-8LSZ]. This kind of employee power should be encouraged, not only because workers deserve better treatment, but also because the outcome is often positive.

\textsuperscript{229} Workers' contribution to the overall economy is sometimes brought starkly to corporate executive minds. For example, a strike by Safeway workers in 2003 following the company's announced benefit cuts and proposed wage freeze did not progress as the corporate executives anticipated. WEBBER, supra note 221, at 2–3. Instead, a group of "labor and labor-affiliated shareholders and their allies" sided with the strikers. Id. at 7. These groups included retirement systems that controlled trillions of dollars. Id. at 7–8.

\textsuperscript{232} See NAACP v. Claiborne Hardware Co., 458 U.S. 886, 933–34 (1982) (finding no legal basis to impose liability on non-violent boycotts by civil rights organizations); see also Citizens United v. FEC, 558 U.S. 310, 372 (2010) (recognizing a First Amendment right to spend money as one sees fit). The global and controversial Boycott, Divestment and Sanctions (BDS) movement has been subject to legal challenges. See, e.g., Jorda in v. Brnovich, 336 F. Supp. 3d 1016, 1050–51 (D. Ariz. 2018); Koonz v. Watson, 283 F. Supp. 3d 1007, 1012, 1021–22, 1024 (D. Kan. 2018) (granting a preliminary injunction to a public school teacher challenging a Kansas law requiring all persons who entered into a contract with the state of Kansas to certify that they were not engaged in a boycott of Israel and finding a probable First Amendment violation).
to pay union dues. In Janus v. American Federation of State, County, and Municipal Employees, Council 31, the United States Supreme Court weakened the power of public sector unions by holding that public employees who choose not to join the union do not have to pay fair-share fees even though they benefit from the union’s collective bargaining on their behalf. In essence, Janus expanded right to work laws to public sector employees.

Rethinking corporate board composition and accountability by having employees elect a significant portion of the board will make corporate board members give greater regard to employees. Given the level of income inequality, this fundamental rethinking of corporate governance is long overdue. We are all one, and we should strive toward universal well-being, whether in the area of health or wealth.

B. Reinforce Democracy

Vast income and wealth inequality impacts more than how much money people have in their pockets. It impacts democracy itself. In order to fully stabilize our democracy, the United States Supreme Court should overrule both Shelby County v. Holder and Citizens United v. Federal Election Commission. It should also end gerrymandering and require independent bi-partisan commissions to draw electoral districts. Instead, the Supreme Court has held that “partisan gerrymandering [] present[s] political questions beyond the reach of federal courts,” thus allowing the practice to continue.

In Shelby County v. Holder, the Supreme Court gutted Section 5 of the Voting Rights Act, the provision that required certain jurisdictions with a history of voting discrimination from changing voting rules without pre-clearance from the Justice Department. The Court found that “the coverage formula in Section 4(b) of the Voting Rights Act—which determines which jurisdictions are covered by Section 5—is unconstitutional because it is based on an old formula.” As a practical matter this means that Section 5 is inoperable until Congress enacts a new coverage formula, which the decision invited Congress to do. In the immediate aftermath of Shelby County, a number of states that were previously subject to pre-clearance

requirements began to restrict voting rights.\textsuperscript{245} For example, voter ID requirements were broadened,\textsuperscript{246} some voting locations were closed, and in North Carolina, a court found that the legislature’s voter suppression efforts targeted African-American voters with “almost surgical precision.”\textsuperscript{247} None of these measures could have been taken had the pre-clearance provision been in place. It is unclear whether the Supreme Court was simply naive, or unconcerned with voting rights when it decided \textit{Shelby County}. At any rate, Congress can and should act by updating the formulas used to determine which jurisdictions will remain subject to pre-clearance requirements, thereby restoring full strength to the Voting Rights Act.

In \textit{Citizens United}, the Supreme Court held that political campaign donations were a form of free speech that could not be limited as they had been previously.\textsuperscript{248} As the Court acknowledged at the outset of its opinion:

\begin{quote}
Federal law prohibits corporations and unions from using their general treasury funds to make independent expenditures for speech defined as an “electioneering communication” or for speech expressly advocating the election or defeat of a candidate. Limits on electioneering communications were upheld in \textit{McConnell v. Federal Election Comm’n}. . . [and] \textit{Austin v. Michigan Chamber of Commerce}. \textit{Austin} had held that political speech may be banned based on the speaker’s corporate identity.\textsuperscript{249}
\end{quote}

Despite this longstanding precedent, the \textit{Citizens United} Court determined that corporations and unions had a free speech right to spend unlimited resources on political campaigns.\textsuperscript{250} As a result, political campaigns now cost billions of dollars, with politicians beholden to large donors to a greater extent than ever.\textsuperscript{251} The 2016 presidential and congressional elections, for example, reportedly cost a total of 6.5

It is nearly impossible for an ordinary low or middle income earner to have an impact when the wealthy can speak so much more forcefully with substantial contributions. As a result, many citizens see our system of democracy as being inherently unfair.

The Supreme Court should revisit *Shelby County*, *Citizens United*, and *Ruco* and overrule them all. Absent that, Congress can and should update the Voting Rights Act in compliance with *Shelby County* so that Section 5 pre-clearance will once again be effective. And *Citizens United*'s anti-democratic impact should either bring about a constitutional amendment reversing it, or the Supreme Court should overrule the decision itself. Also important to a fully functioning democracy is the recognition that gerrymandering, which effectively lets some elected officials pick their voters rather than the other way around, is inherently undemocratic. Enhancing voting rights and limiting money in campaigns will permit ordinary citizens to have a more effective voice in our democracy. And *Citizens United*'s anti-democratic impact should either bring about a constitutional amendment reversing it, or the Supreme Court should overrule the decision itself.

And true change often requires bottom up activism rather than top down dictates. We are beginning to see the results of bottom up activism with calls for Medicare for all or some other form of universal health coverage, something that can enhance both public health and public wealth, but that activism is still confronting big money in politics. Public campaign financing would help level the playing field.

**CONCLUSION**

Health care is unique. It is a necessity that everyone should have access to—a human right that should not be treated as just another commodity. Public health law recognizes the importance of protecting everyone’s health because what impacts one can, before long, impact many. Financial well-being, arguably is less urgent. To be sure, economic

---

254 Health-related costs are one of the prime drivers of individuals filing for bankruptcy. Lorie Konish, *This is the Real Reason Most Americans File for Bankruptcy*, CNBC (Feb. 11, 2019, 2:20 PM), https://www.cnbc.com/2019/02/11/this-is-the-real-reason-most-americans-file-for-bankruptcy.html [https://perma.cc/6WEK-X2MK]. Affordable health care, ideally, will eliminate the need to file for bankruptcy. At the same time, the administrative costs associated with Medicare are far lower than they are in the private, for profit health care sector. Therefore, moving more people onto Medicare or some other public option can reduce overall health care costs, which, as of the end of 2018, accounted for 3.6 trillion dollars and 17.7% of the United States economy. *National Health Expenditure Data: Historical, CTRS. interdependence is not as stark as the interdependence we share when infectious diseases run rampant. The wealthy will not suddenly lose their fortunes because of economic inequality. Instead, the deterioration of our society will take place more gradually, just as climate change has happened relatively gradually. Yet laws related to the economy and financial well-being do not simply reflect private matters in which individuals are left to fend for themselves.

There are at least two reasons for applying a more community minded, public health approach to the economy. First, just as we are interdependent when it comes to public health, we are also interdependent when it comes to financial health. It is not true that the poor have no impact on the well-being of the wealthy. If the bulk of the population is poor or barely making ends meet, they cannot create demand for goods and services produced by those with greater wealth. More importantly, it is morally the right thing to do and the law, as a tool of justice, must take into account public wealth as well as public health. If we constantly permit corporate America and the wealthy to take more and more for itself at the expense of a large portion of the population, we will fail to have the kind of freedom upon which this nation was theoretically built It is critical that we address income and wealth inequities if we are to create a more just America:

America arrived at this sorry state of affairs because we forgot that the true source of the wealth of a nation is the creativity and innovation of its people. One can get rich either by adding to the nation’s economic pie or by grabbing a larger share of the pie by exploiting others—abusing, for instance, market power or informational advantages. We confused the hard work of wealth creation with wealth-grabbing.

The recommendations set forth above, eliminating the business judgment rule in matters of executive compensation, allowing employees to elect 40 percent of corporate board members, and strengthening democracy undoubtedly will improve the public’s wealth.
